

Superforecaster — Kalshi Soft Markets

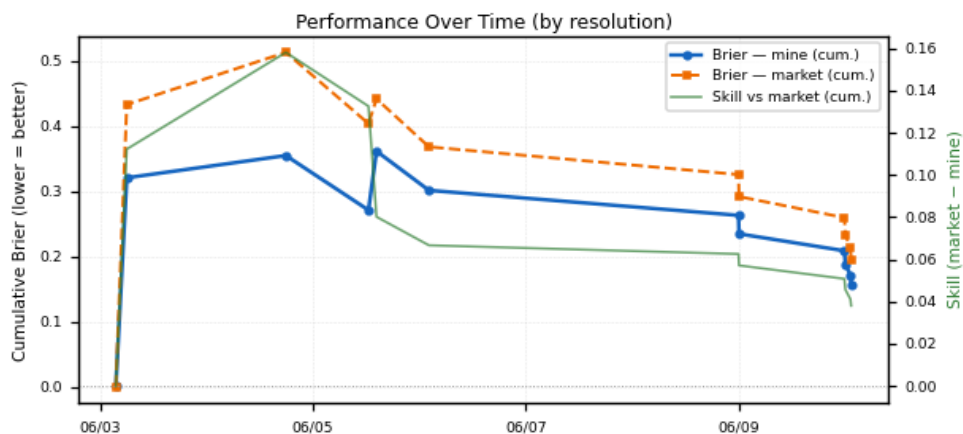

Generated: 2026-06-14T03:39:29Z

Metric	Value
Active markets	20
Resolved markets	12
Total forecast entries	74
Profitable leans (after fees)	2
Resolved with calibration	12
Brier (mine, mean)	0.1570
Brier (market, mean)	0.1950
Skill vs market	0.0380

Performance Over Time

Resolved: **12** Brier (mine): **0.157** vs market **0.195** Skill: **+0.038** (beating the market)

Provisional — only 12 resolved market(s). A skill gap is not statistically distinguishable from luck below ~30 resolutions; read the trend, not the point estimate.

Where the edge is — by segment

Strongest: **politics / us-governor-primary** (skill +0.074, n=3). Weakest: **politics / us-senate** (skill -0.033, n=4).

By category

Category	n	Brier (mine)	Brier (mkt)	Skill
economy	1	0.020	0.076	+0.056
politics	11	0.169	0.206	+0.036

By sub-category

Category / sub-category	n	Brier (mine)	Brier (mkt)	Skill
politics / foreign-election	1	0.423	0.672	+0.250
politics / us-governor-primary	3	0.214	0.289	+0.074
economy / jobs-unemployment	1	0.020	0.076	+0.056

politics / mayoral	2	0.034	0.063	+0.028
politics / us-governor	1	0.000	0.000	+0.000
politics / us-senate	4	0.183	0.150	-0.033

Profit & Loss (realized)

Resolved trades: **4** Realized P&L: **-\$0.08** per contract ROI: **-2.6%** Win rate: **75%**

Paper trade: buy the lean side at its entry ask, after Kalshi fees. A high win rate with negative ROI means winners are underpriced relative to the losers — calibration without profit.

By category

Category	Trades	P&L	ROI	Win%	MaxDD
economy	1	+\$0.25	+33.3%	100%	+\$0.00
politics	3	-\$0.33	-14.2%	67%	-\$0.80

Strategy Scoreboard

Every forecast is tagged with the strategy arm that produced it; resolutions score that arm on both Brier skill and realized profit. The topology is measured, not assumed.

Strategy	n	Brier	Skill	Trades	ROI
untagged	12	0.157	+0.038	4	-2.6%

All resolved markets predate strategy tagging (arm = untagged). The scoreboard differentiates once strategy-tagged forecasts resolve.

Profitability — when does the edge pay? (counterfactual)

Every resolved forecast scored as a modal-side paper trade (12 total, vs only the taken leans in the realized section above). Overall counterfactual ROI: **-16.6%**, win rate 75%. The breakdowns below isolate **when** the strategy is profitable — the goal is profit, so this is the scoreboard that matters most.

Confidence gate: taken leans vs the ones we declined

Decision	n	CF P&L	CF ROI	Win%	MaxDD
taken	4	-\$0.10	-3.2%	75%	-\$0.80
gated/none	8	-\$1.69	-21.9%	75%	-\$1.79

By edge vs market (|my prob – market|) — where profit survives fees

Edge band	n	CF P&L	CF ROI	Win%	MaxDD
0-5pt	7	+\$0.31	+4.6%	100%	-\$0.01
5-10pt	2	-\$0.56	-35.9%	50%	-\$0.80
10-20pt	3	-\$1.53	-60.5%	33%	-\$1.78

By stated confidence — does confidence predict profit?

Confidence	n	CF P&L	CF ROI	Win%	MaxDD
high	7	+\$0.35	+5.2%	100%	-\$0.01
medium	4	-\$1.29	-39.3%	50%	-\$1.74
low	1	-\$0.84	-100.0%	0%	-\$0.84

By category

Category	n	CF P&L	CF ROI	Win%	MaxDD
economy	1	+\$0.25	+33.3%	100%	+\$0.00
politics	11	-\$2.04	-20.3%	73%	-\$2.59

By strategy arm

Strategy	n	CF P&L	CF ROI	Win%	MaxDD
untagged	12	-\$1.79	-16.6%	75%	-\$2.34

Open positions — expected P&L (forward-looking)

Forward-looking expected P&L on **46** open modal-side positions (mark-to-model): **+\$0.71**/contract total (19 are +EV). Of that, **+\$0.72** is on actionable leans (the rest is counterfactual — positions the confidence gate is holding us out of).

Provisional — 12 resolved. Profit ROI is even noisier than Brier at small n; read the direction, not the digits.

Autonomous Learning — policy & proposals

The decision policy (when to take a position) is data, not frozen code. The learning pass reads the system's own resolved record and proposes nudges, but anti-overfit guardrails (min-n, max-step) gate every change. **Policy v1**; proposals as of 2026-06-14.

Knob (decision threshold)	Value
min profitable EV (\$/contract)	0.020
max market-fade gap (no-high-conf)	0.200
conviction medium / high EV	0.05 / 0.12
low confidence never leans	True
adversarial veto binding	True

Pending proposals (from the system's own outcomes)

Knob	Current → Proposed	n	Guardrail	Rationale
max_market_disagreement	0.2 → 0.1	3	INSUFFICIENT_DATA	Counterfactual ROI negative in 10-20pt -> wide fades lose; tighten the fac
low_confidence_never_leans	True → True	11	INSUFFICIENT_DATA	medium-confidence trades lose while high-confidence profit -> consider g
adversarial_veto_binding	True → None	0	INSUFFICIENT_DATA	No resolved positions carry an adversarial verdict yet — the gate is new.

INSUFFICIENT_DATA = directionally real but too few samples to trust; HUMAN_GATE = change too large to auto-apply; AUTO_OK = guardrail-cleared, auto-applied. Nothing auto-applies until the record is large enough.

Active Markets

Will there be more than 25 transit calls through the Strait of Hormuz from Jun 8, 2026 to Jun 14, 2026? (KXHORMUZWEEKLY-26JUN14-T25)

Category: politics | Closes: 2026-06-16 14:00 UTC

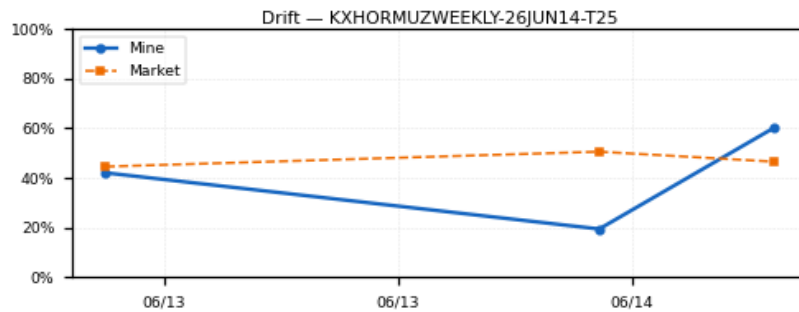

My prob: **60.0%** Confidence: **medium** Market: **46.5%** Edge: **13.5%**

Lean: **YES** Conviction: **medium**

Trade (spot): BUY YES @ \$0.48 now (taker, fee \$0.02/contract) -> net EV **+\$0.10/contract**

Trade (limit): rest BUY YES @ \$0.45 GTC until 2026-06-16 -> net EV **+\$0.13/contract** if filled

Rationale: Held ensemble: ~5/day (~35/wk) supervised transit exceeds 25; entry already locked yesterday.

Will the unemployment rate (U-3) be above 4.1% in June? (KXU3-26JUN-T4.1)

Category: economy | Closes: 2026-07-02 14:00 UTC

My prob: **93.0%** Confidence: **high** Market: **89.5%** Edge: **3.5%**

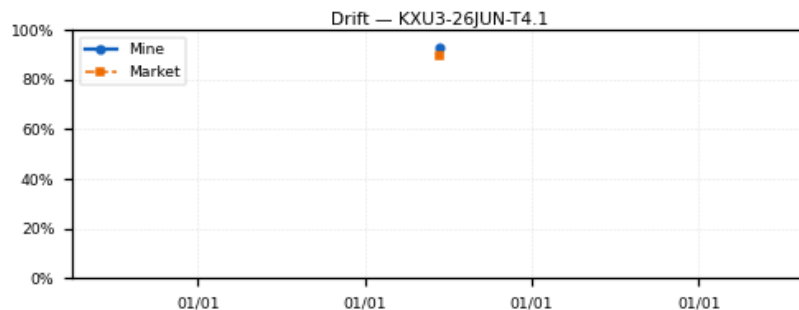

Lean: **YES** Conviction: **low**

Trade (spot): BUY YES @ \$0.90 now (taker, fee \$0.01/contract) -> net EV **+\$0.02/contract**

Trade (limit): rest BUY YES @ \$0.89 GTC until 2026-07-02 -> net EV **+\$0.03/contract** if filled

Rationale: U-3 has held at 4.3% for April and May 2026; resolving NO requires a rare 0.2pp single-month drop against Iran-war and tariff headwinds and rising jobless claims.

Key drivers: U-3 stable at 4.3%; rare 0.2pp monthly drop needed; rising initial claims; CBO/Vanguard project 4.5-4.6% by year-end

Will there be more than 30 transit calls through the Strait of Hormuz from Jun 8, 2026 to Jun 14, 2026? (KXHORMUZWEEKLY-26JUN14-T30)

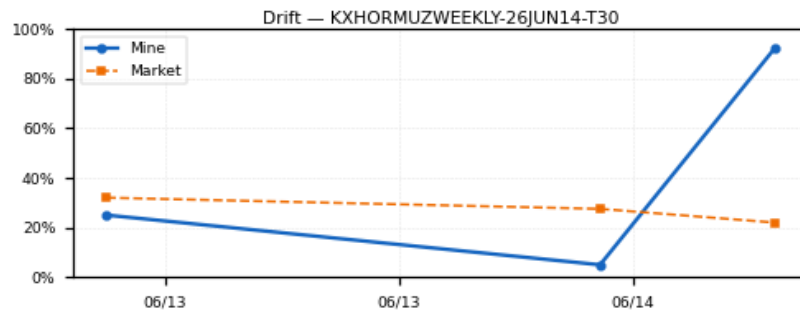

Category: politics | Closes: 2026-06-16 14:00 UTC

My prob: **92.0%** Confidence: **high** Market: **22.0%** Edge: **70.0%**

Lean: **NONE** Conviction: **low**

No actionable lean: ADVERSARIAL VETO: The forecaster assumes a 35/wk baseline without addressing why the market assigns 0.22. Liquid markets typically price in known risks (e.g., geopolitical tensions, maintenance schedules) that a narrow model might overlook. Overconfidence in (Indicative raw EV +\$0.66/contract at my probability, not recommended.)

Rationale: LOCAL Qwen arm: 35/wk derivation -> >30 likely (0.92 high conf). 70pt fade vs market 0.22.

How many dissenting votes at the next Fed meeting? (KXFOMCDISSENTCOUNT-26JUN-0)

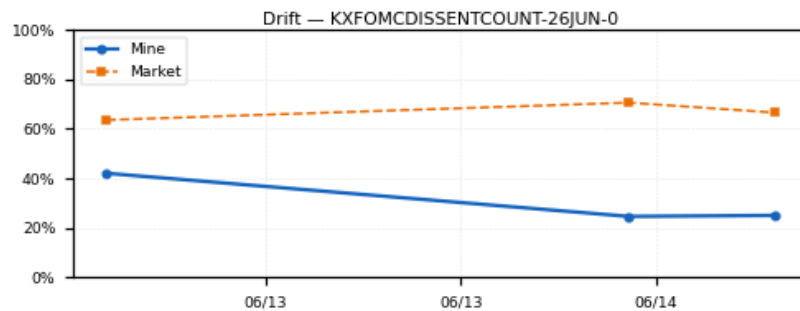

Category: economy | Closes: 2026-06-17 14:00 UTC

My prob: **25.0%** Confidence: **medium** Market: **66.5%** Edge: **-41.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: 42pt gap vs a liquid market without high confidence — more likely my error than edge (Indicative raw EV +\$0.38/contract at my probability, not recommended.)

Rationale: Held ensemble: most-divided-since-1992 expected -> dissents likely; new chair Warsh wildcard. Market 0.665 puzzling.

Will the 7-day moving average of transit calls through the Strait of Hormuz as reported by the IMF PortWatch be above 60 before July 1, 2026? (KXHORMUZNORM-26MAR17-B260701)

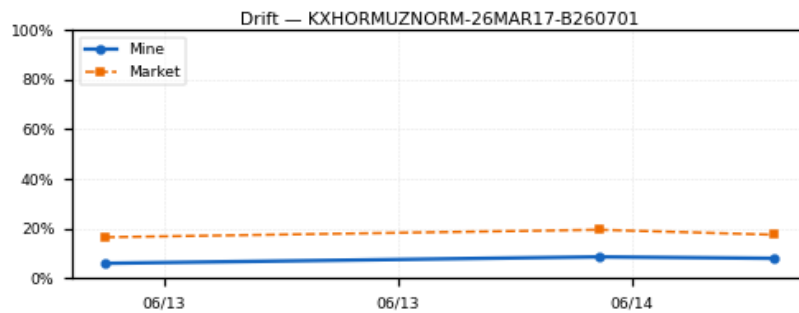

Category: politics | Closes: 2026-06-15 14:00 UTC

My prob: **8.0%** Confidence: **medium** Market: **17.5%** Edge: **-9.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: ADVERSARIAL VETO: The forecaster's position relies on unspecified factors and short-term observations to predict a low probability of Hormuz normalization by 2026, diverging significantly from the market. Without concrete evidence, credible sourcing, or anal (Indicative raw EV +\$0.08/contract at my probability, not recommended.)

Rationale: Held 3-Opus ensemble: toll/diplomatic stalemate + backlog block full normalization by Jul 1; world unchanged since yesterday.

Will Toby Doeden be the Republican nominee for Governor in South Dakota? (KXGOVSDNOMR-26-TDOE)

Category: politics | Closes: 2026-06-30 14:00 UTC

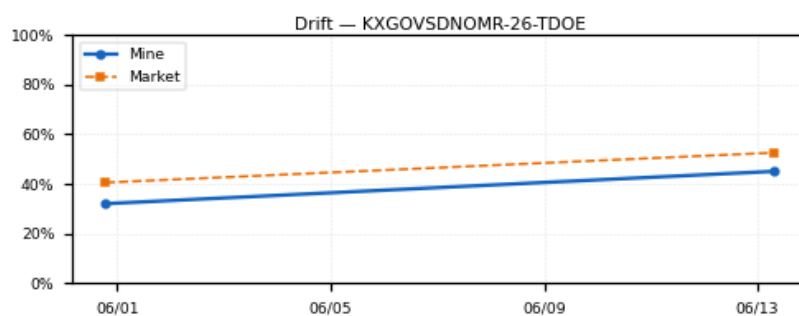

My prob: **45.0%** Confidence: **low** Market: **52.5%** Edge: **-7.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: low confidence — estimate too uncertain to fade the market (Indicative raw EV +\$0.05/contract at my probability, not recommended.)

Rationale: Doeden led the June 2 primary (31% vs Rhoden 25%) forcing a first-ever July 28 runoff; establishment/donor consolidation behind Rhoden and lower runoff turnout slightly favor Rhoden, putting Doeden just under even. Market resolves on the actual nominee (closes Nov 3).

Key drivers: Doeden primary lead; establishment consolidation to Rhoden; lower runoff turnout favors establishment; no Trump endorsement; Doeden self-funding

Will the Federal Reserve Hike rates by 25bps at their June 2026 meeting?

(KXFEDDECISION-26JUN-H25)

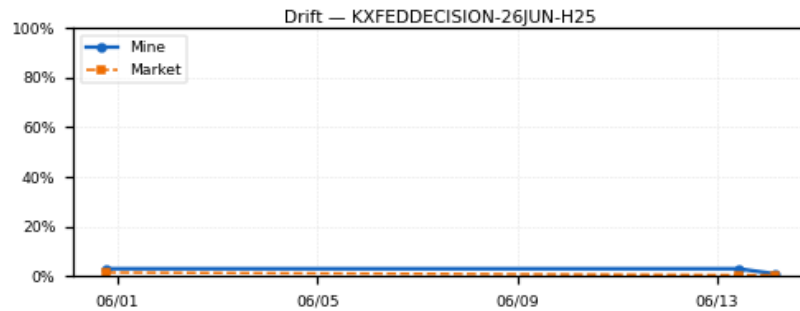

Category: economy | Closes: 2026-06-17 18:05 UTC

My prob: **1.0%** Confidence: **high** Market: **0.5%** Edge: 0.5%

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 1%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: No June hike; hawkish bias is year-end, not now.

Will the Federal Reserve Hike rates by >25bps at their June 2026 meeting?

(KXFEDDECISION-26JUN-H26)

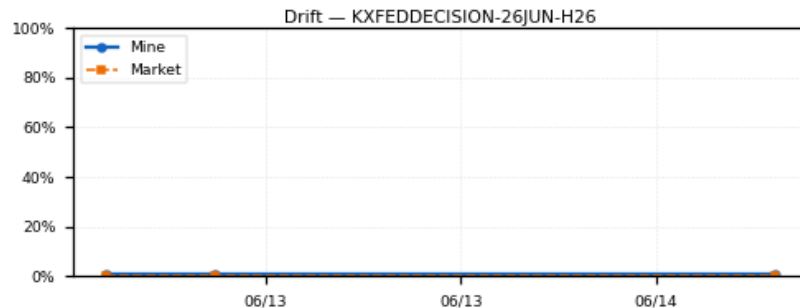

Category: economy | Closes: 2026-06-17 18:05 UTC

My prob: **1.0%** Confidence: **high** Market: **0.5%** Edge: 0.5%

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 1%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: Hike ≥ 26 bps essentially zero in June.

Will Marco Rubio visit Iran before Jul 1, 2026? (KXVISITIRAN-26JUL01-MRUB)

Category: politics | Closes: 2026-07-01 14:00 UTC

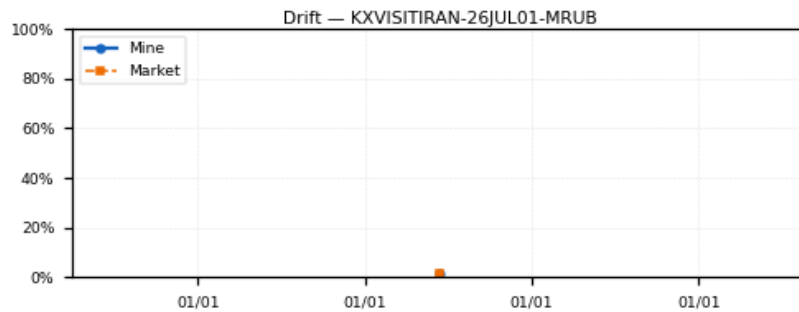

My prob: **1.2%** Confidence: **high** Market: **1.3%** Edge: **-0.1%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 1%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: All US-Iran negotiations occur in third countries (Oman, Pakistan, Geneva), the prospective signing is in Geneva with VP Vance not Rubio, and no US Secretary of State has visited Iran since 1979 — a Rubio visit to Tehran before July 1 is virtually impossible.

Key drivers: talks held in third countries; Vance not Rubio is signatory; no SecState visit since 1979; Level 4 travel advisory

Will any U.S. House member visit Iran before Jul 1, 2026? (KXVISITIRAN-26JUL01-AHOU)

Category: politics | Closes: 2026-07-01 14:00 UTC

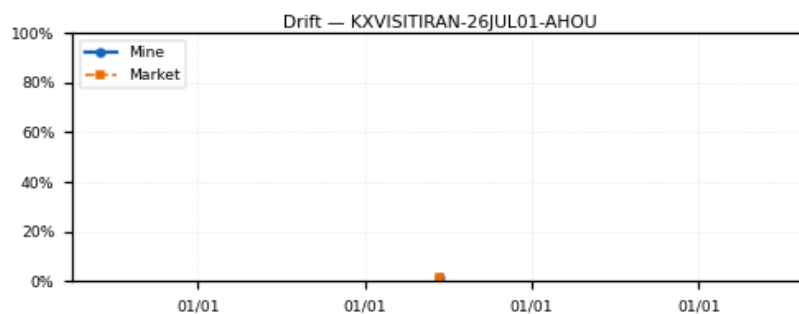

My prob: **1.5%** Confidence: **high** Market: **1.3%** Edge: **0.2%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 2%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: No sitting US House member has visited Iran in the modern era; with an active conflict, a Level 4 advisory, and no planned CODEL, a visit before July 1 is virtually impossible (marginally above Rubio as an informal trip is less institutionally constrained).

Key drivers: no modern sitting-member visits; active conflict; Level 4 advisory; no planned CODEL

Will the Federal Reserve Cut rates by >25bps at their June 2026 meeting?

(KXFEDDECISION-26JUN-C26)

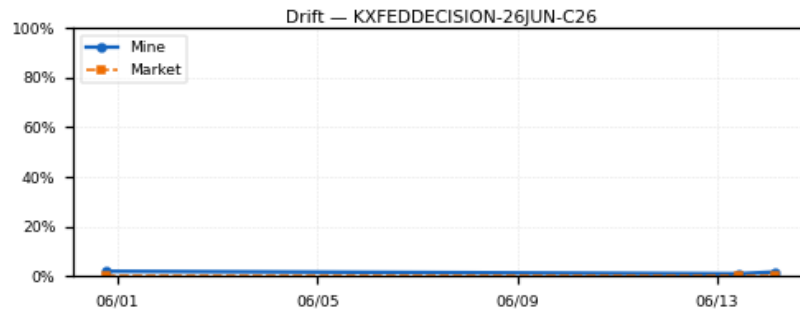

Category: economy | Closes: 2026-06-17 18:05 UTC

My prob: **1.7%** Confidence: **high** Market: **0.5%** Edge: **1.2%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 2%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: LOCAL arm: cut>=26bps near-zero given 98.3% hold + hawkish chair.

Will the 7-day moving average of transit calls through the Strait of Hormuz as reported by the IMF PortWatch be above 60 before June 15, 2026?

(KXHORMUZNORM-26MAR17-B260615)

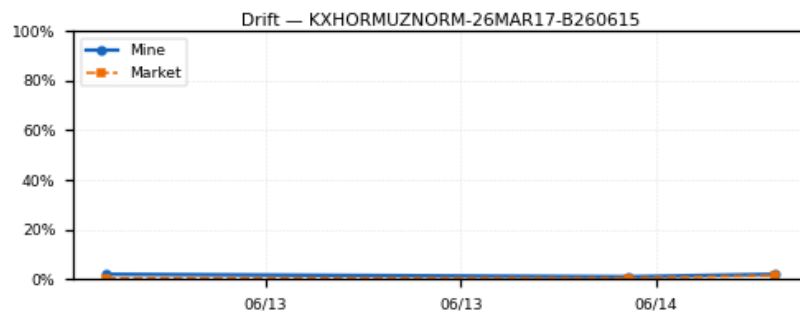

Category: politics | Closes: 2026-06-15 14:00 UTC

My prob: **2.0%** Confidence: **medium** Market: **1.5%** Edge: **0.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 2%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: Ceasefire holds but ~95% below normal; full normalization in 1 day ~0.

Will the Federal Reserve Cut rates by 25bps at their June 2026 meeting?

(KXFEDDECISION-26JUN-C25)

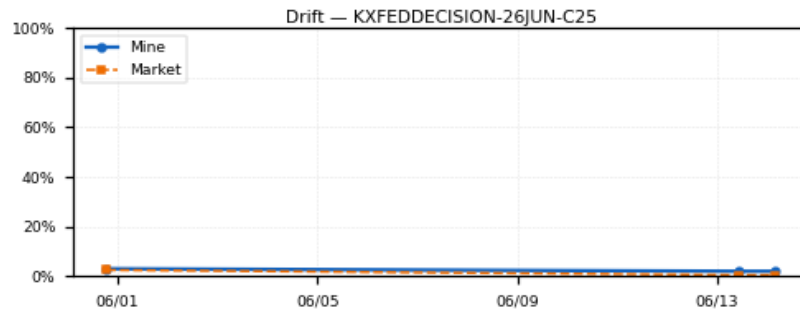

Category: economy | Closes: 2026-06-17 17:59 UTC

My prob: **2.0%** Confidence: **high** Market: **0.5%** Edge: **1.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 2%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: 98.3% hold; hawkish Warsh; cut near-zero.

Will Trump make 2 trips to Mar-a-Lago as President in Jun 2026? (KXLAGODAYS-26JUN-2)

Category: politics | Closes: 2026-06-30 14:00 UTC

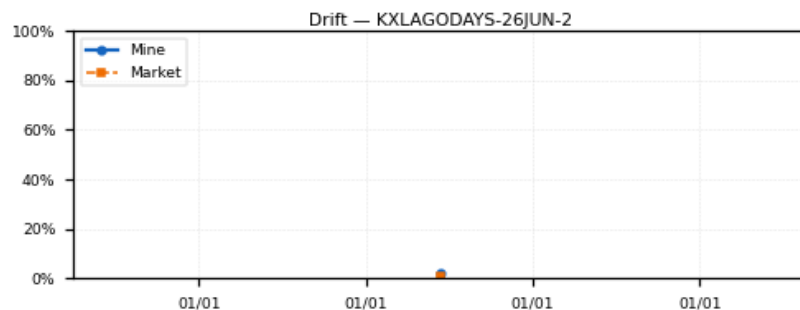

My prob: **2.0%** Confidence: **low** Market: **1.0%** Edge: **1.0%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 2%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: Two June Mar-a-Lago trips is very unlikely given seasonal closure and a packed Iran/G7/NATO schedule.

Key drivers: summer closure; packed schedule

Will Mike Mazzei be the Republican nominee for Governor in Oklahoma?

(KXGOVOKNOMR-26-MMAZ)

Category: politics | Closes: 2026-06-30 14:00 UTC

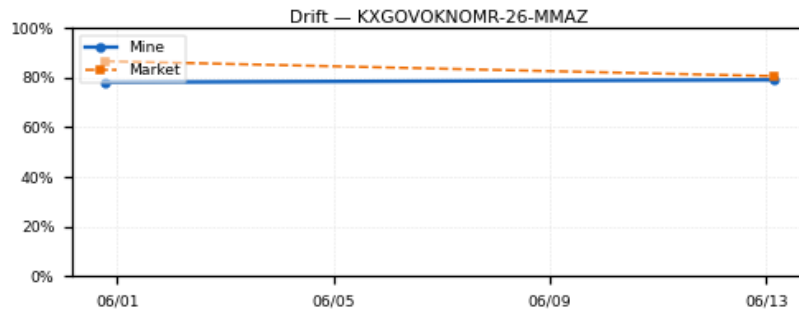

My prob: **79.0%** Confidence: **medium** Market: **80.5%** Edge: **-1.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean YES (my prob 79%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: Polling leader (~23-24%) in a 5-way race headed to an Aug 25 runoff; Trump's May 29 endorsement is the dominant signal in OK GOP primaries and his \$10.9M self-funding leads the ad war. Market (0.805) ~ my estimate, so no edge.

Key drivers: trump_endorsement; polling_lead; self_funding_10.9M; runoff_likely

Will the Federal Reserve Hike rates by 0bps at their June 2026 meeting?

(KXFEDDECISION-26JUN-H0)

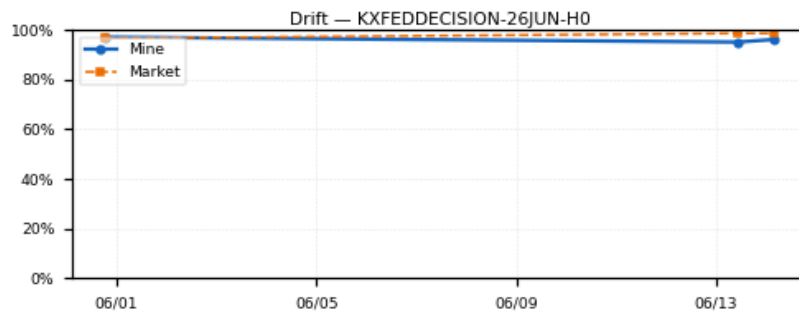

Category: economy | Closes: 2026-06-17 17:59 UTC

My prob: **96.0%** Confidence: **high** Market: **98.5%** Edge: **-2.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean YES (my prob 96%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: 98.3% hold priced; Warsh's first meeting, hawkish hold expected.

Will legislation that reauthorizes FISA Section 702 authority become law before Jun 19, 2026? (KXFISAEXTEND-26JUN-26JUN19)

Category: politics | Closes: 2026-07-01 14:00 UTC

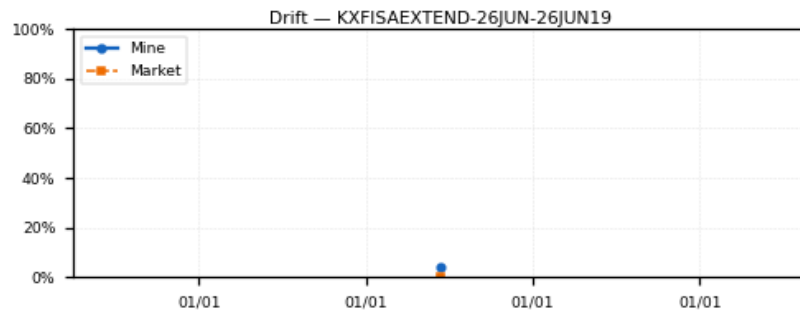

My prob: **4.0%** Confidence: **high** Market: **0.5%** Edge: **3.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 4%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: FISA 702 lapsed June 12/13 after the House voted it down and recessed until June 23; with Speaker Johnson declining an emergency recall, enactment before June 19 is mechanically near-impossible.

Key drivers: House in recess until June 23; no emergency recall; failed Senate UC; Pulte-DNI impasse

Will the US agree to a new Iranian nuclear deal this year? (KXUSAIRANAGREEMENT-27-26JUL)

Category: politics | Closes: 2026-07-01 14:00 UTC

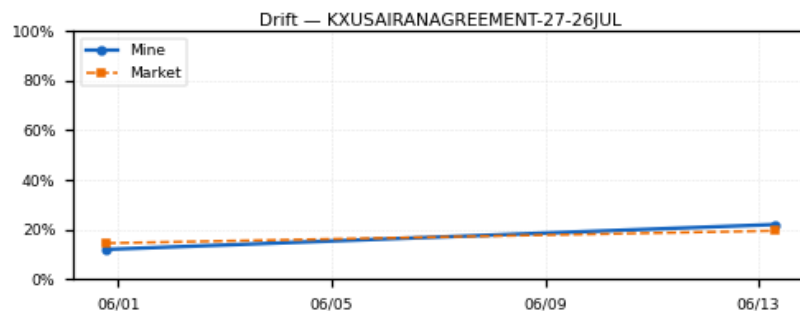

My prob: **22.0%** Confidence: **medium** Market: **19.5%** Edge: **2.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 22%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: Diplomatic momentum has improved (reports of a 'final agreed text' and officials voicing high confidence), but the actual nuclear terms required to resolve YES remain deferred to follow-on talks, and Trump has repeatedly claimed a deal 'imminent' without one materializing; a qualifying formal deal before the ~July 1 close is more likely than not to fail.

Key drivers: nuclear terms deferred to later talks; repeated false 'deal imminent' claims; Iran enrichment red line; new Supreme Leader hardening stance; 18-day window

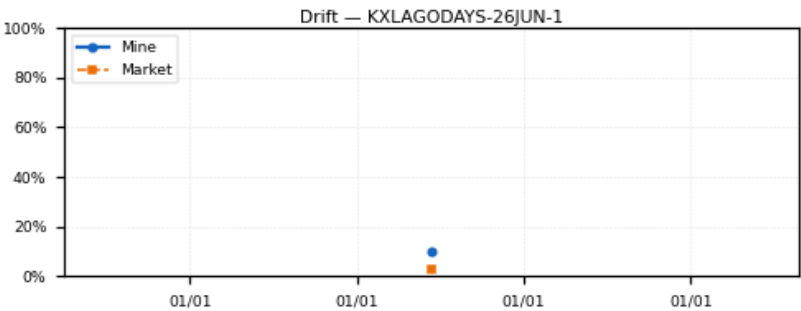

Will Trump make 1 trips to Mar-a-Lago as President in Jun 2026? (KXLAGODAYS-26JUN-1)

Category: politics | Closes: 2026-06-30 14:00 UTC
My prob: **10.0%** Confidence: **low** Market: **2.5%** Edge: **7.5%**
Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 10%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: A single personal-use Florida visit in the Jun 18-30 window is possible but unlikely given seasonal closure and Iran/G7 schedule.

Key drivers: summer closure; Iran/G7 schedule; small personal-visit chance

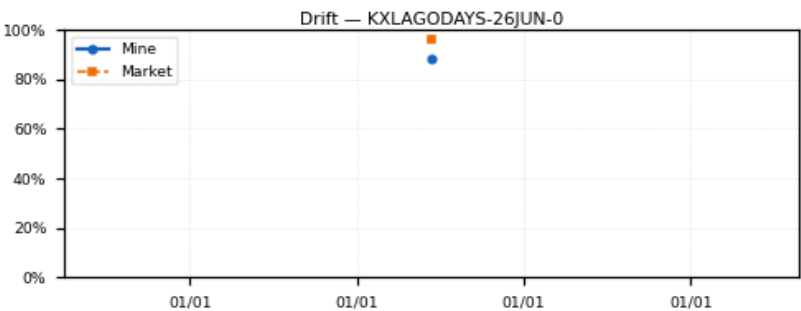

Will Trump make 0 trips to Mar-a-Lago as President in Jun 2026? (KXLAGODAYS-26JUN-0)

Category: politics | Closes: 2026-06-30 14:00 UTC
My prob: **88.0%** Confidence: **medium** Market: **96.0%** Edge: **-8.0%**
Lean: **NONE** Conviction: **low**

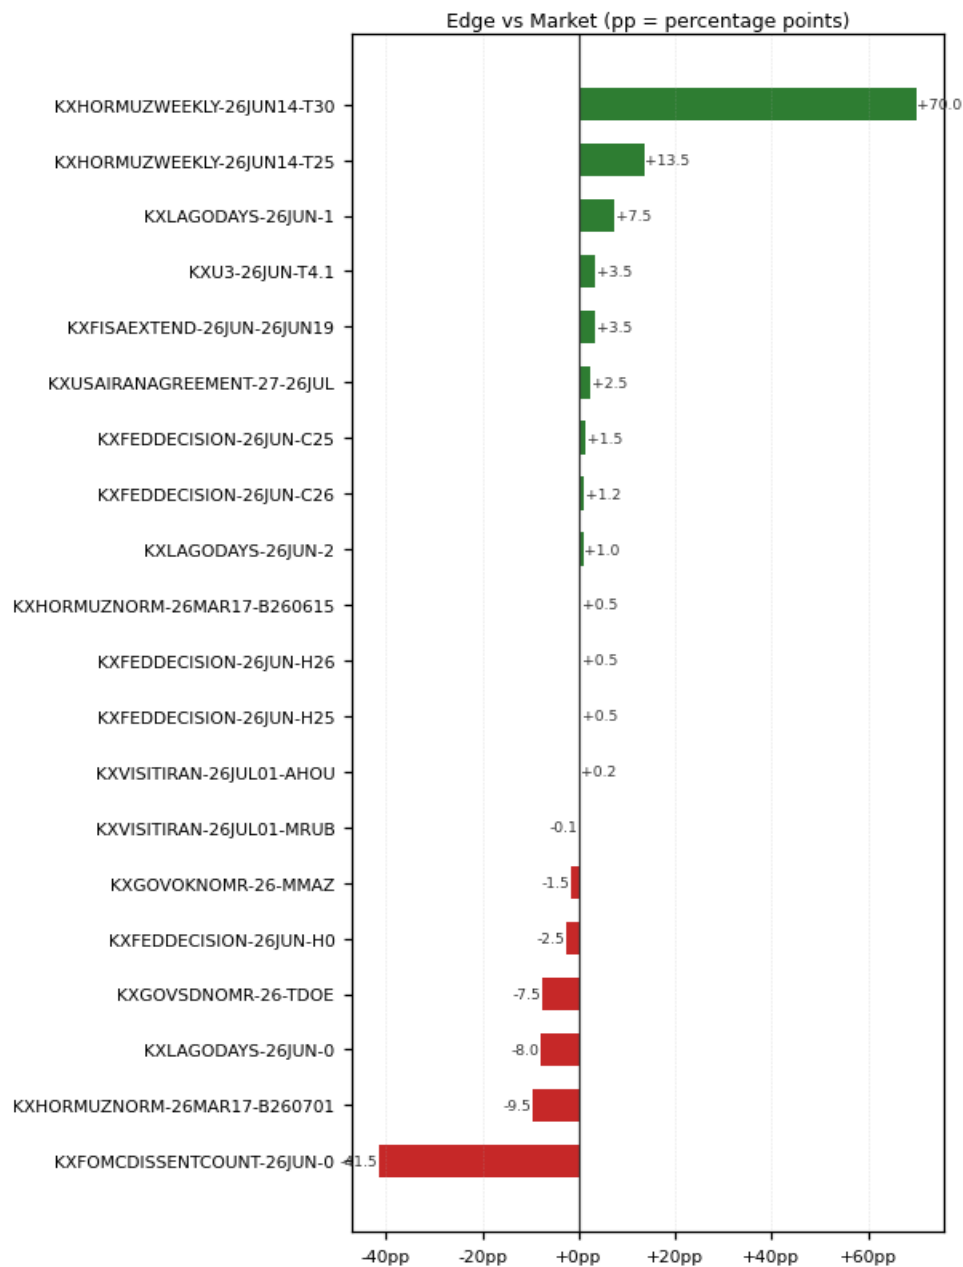

No actionable lean: I lean YES (my prob 88%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: Mar-a-Lago is seasonally closed in summer (Trump made zero June visits in every first-term year), zero trips have occurred through mid-June, and Iran-war management plus G7 travel keep him DC-anchored, making 0 trips the strongly modal outcome.

Key drivers: summer seasonal closure; zero trips through mid-June; Iran war keeps him in DC; G7 travel; Bedminster is summer retreat

Edge Overview

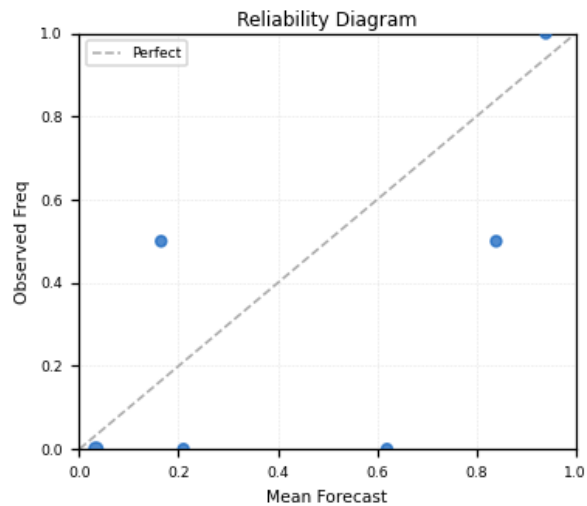

Profitable Leans (after fees)

Ticker	Side	Spot EV/contract	Limit EV/contract	Conviction
KXHORMUZWEEKLY-26JUN14-T25	YES	+\$0.10	+\$0.13	medium
KXU3-26JUN-T4.1	YES	+\$0.02	+\$0.03	low

Fees use Kalshi's standard taker formula $\text{ceil}(0.07 * p * (1 - p)) / \text{contract}$; resting (maker) limit fills may be cheaper on some series. Paper only - read-only key places no orders.

Lessons Learned

Never move a forecast materially on one noisy data point (esp. a single poll); weight by reliability and require corroboration. Don't recommend fading a liquid market on a low-confidence estimate.
