Structural Edge — the money engine (paper)

Live forward record of the history-learned market-calibration edge (*lib/atlas*: mid-liquidity longshot fades, +EV after fee & half-spread). The **conservative** column is the official number: a rec counts only if the rec-time orderbook snapshot proves the limit was marketable, and it fills at the real ask. The legacy cohort predates fill evidence and is provisional only. **All positions are PAPER — no live trading until the verification bar passes and the user signs off (constraint 2026-07-17).**

Cohort	Resolved	Scored	No-fill	Win rate	P&L	Deployed	ROI	Beat mkt
VERIFIED (conservative — official)	20	19	1	16/19 (84%)	-\$1.02	\$17.02	-6.0%	16/19
legacy (optimistic — fills unverified)	14	14	0	14/14 (100%)	+\$2.90	\$11.10	+26.1%	14/14

Verification bar (precommitted, PLAN_FOR_OPUS \$A4) — passing unlocks the live-trading *conversation* only: **NOT PASSED**

Criterion	Target	Current	Pass
n_verified_fills	40	19	—
conservative_roi	0.08	-0.060	—
roi_ci_excludes_zero	>0 at 90% CI	[-0.232, +0.061]	—
positive_cells	3	0	—
tail_survival	tail hit absorbed w/ ROI>0, or stress P(loss)<10%	tail_hits=3, stress_p_loss=0.001	PASS
hit_rate_consistent	observed loss-rate <= calibrated + 2σ	expected=0.013, observed=0.158	—

Tail stress (Monte Carlo, 100 future recs × 5000 trials, calibrated probabilities as truth): P(ROI<0) = **0.1%**; ROI mean +9.2% (p5 +4.5% / p95 +13.7%); expected max drawdown -1.35 units; break-even win rate 81.6%. A 13-0 start does NOT survive this section unexamined: one tail hit erases 3–8 wins.

Per-cell record (verified cohort — the kill-switch view: a cell dies at n≥15 with ROI<0)

Cell	Scored	Win rate	P&L	ROI
statements 5-15c mid	19	84%	-\$1.02	-6.0%

Paper broker (resting-limit simulation, D1 sizing on a notional \$1000): 84 orders (expired 3, filled 10, partial 6, settled 5, skipped 60). Settled P&L \$-32.48 on \$80.48 (ROI -40.4%); no-fill rate 38%; equity \$967.52, deployed \$211.02, drawdown -3.2%.

Open recommendations (paper basket — correlated longshot fade; size small & equal; one thematic position)

Open positions — expected P&L (forward-looking)

Forward-looking expected P&L on **75** open modal-side positions (mark-to-model): **+\$0.15/contract** total (22 are +EV). Of that, **+\$0.53** is on actionable leans (the rest is counterfactual — positions the confidence gate is holding us out of).

Autonomous Learning — policy & proposals

The decision policy (when to take a position) is data, not frozen code. The learning pass reads the system's own resolved record and proposes nudges, but anti-overfit guardrails (min-n, max-step) gate every change. **Policy v10**;

proposals as of 2026-07-24.

Knob (decision threshold)	Value
min profitable EV (\$/contract)	0.020
max market-fade gap (no-high-conf)	0.050
conviction medium / high EV	0.05 / 0.12
low confidence never leans	True
adversarial veto binding	True

Pending proposals (from the system's own outcomes)

Knob	Current → Proposed	n	Guardrail	Rationale
max_market_disagreement	0.05 → None	51	INSUFFICIENT_DATA	No coherent 'wider fades lose' ladder yet (signal not monotone / tail band
hard_gap_ceiling	0.2 → None	51	INSUFFICIENT_DATA	No catastrophic wide-fade band yet — the absolute ceiling stays put.
min_confidence_for_lean	high → None	51	INSUFFICIENT_DATA	Confidence gating evidence inconclusive (or floor already raised).
adversarial_veto_binding	True → None	9	INSUFFICIENT_DATA	Veto precision becomes learnable once vetoed/revised positions resolve;

INSUFFICIENT_DATA = directionally real but too few samples to trust; HUMAN_GATE = change too large to auto-apply; AUTO_OK = guardrail-cleared, auto-applied. Nothing auto-applies until the record is large enough.

Active Markets

Will Mike Mazzei be the Republican nominee for Governor in Oklahoma?

(KXGOVOKNOMR-26-MMAZ)

Category: politics | Closes: 2026-06-30 14:00 UTC

My prob: **57.9%** Confidence: **high** Market: **81.5%** Edge: **-23.6%**

Lean: **NONE** Conviction: **low**

No actionable lean: 24pt gap exceeds the hard ceiling (20pt) — beyond this divergence from a liquid market, even high confidence is treated as model error, not edge (Indicative raw EV +\$0.21/contract at my probability, not recommended.)

Rationale: There is currently no publicly available evidence or announcements regarding Mike Mazzei's candidacy or likelihood of securing the Republican nomination for Governor in Oklahoma. The absence of concrete information from reputable sources makes it difficult to assign a higher probability. The base rate for a relatively unknown candidate winning a major nomination is low, and no significant developm

Key drivers: Lack of public announcements or endorsements; No recent polling or campaign activity reported; No prior political experience or visibility for Mike Mazzei

(KXGOVWINOMD-26-FHON)

My prob: **48.2%** Confidence: **medium** Market: **64.5%** Edge: **-16.3%**

No actionable lean: 16pt gap vs a liquid market without high confidence — more likely my error than edge (Indicative raw EV +\$0.14/contract at my probability, not recommended.)

Key drivers: Current political prominence of Francesca Hong; Recent developments in Wisconsin Democratic Party leadership; Public endorsements or campaign activity

My prob: **25.5%** Confidence: **high** Market: **15.5%** Edge: **10.0%**

No actionable lean: ADVERSARIAL VETO: The forecaster's confidence is not supported by sufficient evidence, and the position diverges from the market without a credible explanation. The edge is not clearly established, and the reasoning lacks depth and specificity. (Indicative raw EV +\$0.08/contract at my probability, not recommended.)

Key drivers: Gentner Drummond advancing to the GOP runoff for governor.; The uncertainty surrounding the outcome of the runoff against Mike Mazzei.; Historical precedent of competitive GOP primaries in Oklahoma leading to runoffs.

Will Toby Doeden be the Republican nominee for Governor in South Dakota?

(KXGOVSDNOMR-26-TDOE)
Category: politics | Closes: 2026-06-30 14:00 UTC
My prob: 12.7% Confidence: high Market: 6.6% Edge: 6.1%
Lean: NONE Conviction: low

No actionable lean: ADVERSARIAL VETO: The forecast lacks sufficient evidence to justify the proposed probability and position. The divergence from the market is not supported by robust reasoning, and the confidence level appears inflated given the uncertainty and thin sourcing. (Indicative raw EV +\$0.05/contract at my probability, not recommended.)

Rationale: The evidence suggests Larry Rhoden is currently leading Toby Doeden in multiple polls, which is a strong indicator that Rhoden may be the Republican nominee. However, the uncertainty around poll accuracy and the potential for last-minute shifts in public opinion means that Doeden still has a non-trivial chance. Doeden's unique policy positions (e.g., anti-property tax, bitcoin advocacy) may appeal

Key drivers: Larry Rhoden's current lead in polls; Uncertainty around poll accuracy and potential biases; Doeden's policy positions and their potential appeal or alienation of voters; Impact of campaign events and statements on voter perception

Will Mandela Barnes be the Democratic nominee for Governor in Wisconsin?

(KXGOVWINOMD-26-MBAR)
Category: politics | Closes: 2026-08-31 14:00 UTC
My prob: 3.8% Confidence: high Market: 5.0% Edge: -1.1%
Lean: NONE Conviction: low

No actionable lean: no +EV value bet at the ask (my prob 4%, modal NO) — staying out. (Indicative raw EV +\$0.00/contract at my probability, not recommended.)

Rationale: The evidence suggests that Mandela Barnes is not currently identified as a candidate in the Wisconsin gubernatorial race. David Crowley has reentered the race with significant endorsements, while Sara Rodriguez has dropped out, creating a dynamic but not necessarily favorable environment for Barnes. No direct evidence links Barnes to the race, and the base rate of multiple candidates in Wisconsin

Key drivers: David Crowley's reentry into the race; Sara Rodriguez's exit; Lack of direct evidence linking Mandela Barnes to the race

Will it be confirmed that Graham Platner is the Democratic nominee for U.S. Senate in Maine on July 31, 2026? (KXMEDNOMJUL-26AUG01-GPLA)

Category: politics | Closes: 2026-08-08 14:00 UTC

My prob: **0.0%** Confidence: **high** Market: **0.5%** Edge: **-0.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 0%, modal NO) — staying out.

Rationale: The base rate for a candidate withdrawing from a Senate nomination within the last few weeks before official confirmation is low but non-zero, given historical cases of similar withdrawals in politics. The key evidence includes Platner's official withdrawal after facing allegations of sexual assault; these allegations are significant and have led to substantial support being withdrawn from him. Gi

Key drivers: Graham Platner officially withdrew; A candidate facing sexual assault allegations; Troy Jackson moving toward nomination; the likelihood of finding another viable candidate so close to the deadline

Will it be confirmed that Dan Kleban is the Democratic nominee for U.S. Senate in Maine on July 31, 2026? (KXMEDNOMJUL-26AUG01-DKLE)

Category: politics | Closes: 2026-08-08 14:00 UTC

My prob: **0.0%** Confidence: **high** Market: **0.5%** Edge: **-0.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 0%, modal NO) — staying out.

Rationale: The evidence notes suggest that multiple candidates have withdrawn from the Maine Senate race, including Graham Platner, and that Maine Democrats are backing Troy Jackson. However, there is no direct information about Dan Kleban's involvement in the race or his potential withdrawal. The base rate indicates that candidates in Senate races may face challenges leading to withdrawal, but without speci

Key drivers: Multiple candidates have withdrawn from the Maine Senate race; including Graham Platner.; Maine Democrats are backing Troy Jackson ahead of the July 25 convention.; No direct information about Dan Kleban's involvement or potential withdrawal.

Will it be confirmed that Jordan Wood is the Democratic nominee for U.S. Senate in Maine on July 31, 2026? (KXMEDNOMJUL-26AUG01-JWOO)

Category: politics | Closes: 2026-08-08 14:00 UTC

My prob: **0.0%** Confidence: **high** Market: **0.5%** Edge: **-0.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 0%, modal NO) — staying out.

Rationale: Multiple credible news sources from July 19-20, 2026, consistently report that Troy Jackson is the emerging Democratic nominee for the U.S. Senate in Maine, with top rivals dropping out. While this strongly suggests Jackson is the likely nominee, the question specifically asks about Jordan Wood, who is not mentioned in any of the evidence.

There is no indication that Wood is a candidate or has been

Key drivers: Troy Jackson is the clear frontrunner based on multiple reputable sources; with no mention of Jordan Wood in the evidence.; The evidence does not provide any indication that Wood is a candidate or has been considered for the nomination.; The nomination process could still change; but current informati

Will it be confirmed that Nirav Shah is the Democratic nominee for U.S. Senate in Maine on July 31, 2026? (KXMEDNOMJUL-26AUG01-NSHA)

Category: politics | Closes: 2026-08-08 14:00 UTC

My prob: **0.0%** Confidence: **high** Market: **0.5%** Edge: **-0.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 0%, modal NO) — staying out.

Rationale: All evidence from reputable sources confirms that Nirav Shah has dropped out of the Maine Senate race and that his primary rival, Troy Jackson has effectively secured the Democratic nomination with support from top political news outlets on or before July 20th. The base rate for a candidate dropping out and then reversing is negligible (close to zero). There are no key uncertainties left: the drop

Will it be confirmed that Troy Jackson is the Democratic nominee for U.S. Senate in Maine on July 31, 2026? (KXMEDNOMJUL-26AUG01-TJAC)

Category: politics | Closes: 2026-08-08 14:00 UTC

My prob: **99.1%** Confidence: **high** Market: **99.5%** Edge: **-0.4%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 99%, modal YES) — staying out.

Rationale: Troy Jackson has consistently been reported as the frontrunner for the Democratic Senate nomination in Maine, with multiple reputable sources confirming his dominance in delegate elections, growing support, and positioning as the likely replacement for Graham Platner. The evidence is robust and consistent across multiple sources, with no contradictory signals. While there are uncertainties related

Key drivers: Troy Jackson's dominance in delegate elections (96% of delegates) strongly indicates his nomination.; Multiple reputable news sources (PBS; NY Times; Maine Public; etc.) consistently report him as the frontrunner.

Who will win the 2026 South Carolina Republican Senate special primary? (KXSCRENS-26-RFRY)

Category: politics | Closes: 2026-08-11 14:00 UTC

My prob: **8.5%** Confidence: **high** Market: **8.5%** Edge: **0.0%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 8%, modal NO) — staying out.

Rationale: The evidence suggests that Lindsey Graham's sister is currently the heavy favorite in the South Carolina Senate primary, as indicated by Kalshi News. However, the political climate is dynamic, and factors such as endorsements (e.g., Trump's potential involvement) and voter turnout could shift the odds. Prediction markets are active, which adds some level of quantification to the uncertainty, but t

Key drivers: Lindsey Graham's sister's strong initial favorability; Potential impact of Trump's endorsement; Voter turnout and political climate; Prediction markets' current sentiment

Who will win the 2026 South Carolina Republican Senate special primary?

(KXSCRSSENS-26-DNOR)

Category: politics | Closes: 2026-08-11 14:00 UTC

My prob: **68.5%** Confidence: **high** Market: **68.5%** Edge: **0.0%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 68%, modal YES) — staying out.

Rationale: Graham Nordone is currently the heavy favorite due to her familial ties to Lindsay Graham and endorsement from Trump, which aligns with historical patterns where prominent endorsements influence primary outcomes. However, the evidence also notes that polls suggest a close race, and the special primary is expected to be highly competitive, indicating that while Nordone has a strong position, the ou

Key drivers: Trump's endorsement; Familial connection to Lindsay Graham; Competitiveness of the primary; Polls indicating a close race

Will David Crowley be the Democratic nominee for Governor in Wisconsin?

(KXGOVWINOMD-26-DCRO)

Category: politics | Closes: 2026-08-31 14:00 UTC

My prob: **20.2%** Confidence: **high** Market: **20.5%** Edge: **-0.3%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 20%, modal NO) — staying out.

Rationale: David Crowley is not currently a well-known figure in Wisconsin politics, and there is no evidence in the search results indicating that he is a prominent candidate or has made significant moves to position himself as the Democratic nominee. The absence of direct mentions of Crowley in reputable news sources suggests he is not a frontrunner. The reference class for underdog candidates in state-lev

Key drivers: Lack of media presence or coverage of David Crowley; No indication of strong grassroots support or endorsements; No prior political prominence in Wisconsin

Edge Overview

Profitable Leans (after fees)

No profitable leans after fees this run — markets are efficiently priced for our estimates.

Fees use Kalshi's standard taker formula $\text{ceil}(0.07 * p * (1 - p)) / \text{contract}$; resting (maker) limit fills may be cheaper on some series. Paper only - read-only key places no orders.

Lessons Learned

Do not let the atlas/screen fade RT/culture 'score >= threshold' contracts on prestige/critically-acclaimed films where the near-certain YES is real. The favorite-longshot prior does not apply when YES is genuinely ~99% (concentrated critical consensus). Carve-out: suppress NO-fades on RT-score threshold markets when yes_ask >= ~0.95 with corroborating source consensus. Structural/basket error, not a forecaster error.

2026-07-22 | resolution | KXRT-ODY-90 | culture [atlas-fade-prestige-culture]

Brier (mine): 0.4356 | Brier (market): 0.3306 | lost to market

WIN: locked entry p~0.95 beat market (Brier 0.0025 vs 0.0121); Trump attended an event he publicly committed to — high base rate, correct direction. Critic's low-base-rate 'miss' rejected as directionally confused (Defender). Upheld process note: even on confident forecasts near the market price, log an explicit CI and cite >=3 independent sources with a one-line divergence justification.

2026-07-19 | resolution | KXTRUMPATTEND | politics [mechanism-anchored-win]

Brier (mine): 0.0025 | Brier (market): 0.0121 | beat market

Fading an over-priced CPI strike is the right trade, but keep the tail floor: monthly CPI prints have surprised by 0.1pp+ often enough that sub-1% forecasts on an adjacent strike are miscalibrated even when they win.

2026-07-18 | resolution | KXCPI-26JUN-T0.0 | economy [cpi-strike-fade]

Brier (mine): 0.1600 | Brier (market): 0.0156 | lost to market

The YoY strike fade with an acknowledged data gap was well-reasoned; keep documenting why the market's higher tail is unjustified — that justification is what separated this from the T0.0 critique.

2026-07-18 | resolution | KXECONSTATCPIYOY-26JUN-T3.9 | economy [cpi-strike-fade]

Brier (mine): 0.0900 | Brier (market): 0.0272 | lost to market

Same family as T3.9 but forecast 0.0002 — the zero-tail habit repeats across CPI strikes. Set a standing floor (>=0.005) for any single-print macro strike regardless of distance.

2026-07-18 | resolution | KXECONSTATCPIYOY-26JUN-T4.1 | economy [zero-probability-tail]

Brier (mine): 0.0400 | Brier (market): 0.0004 | lost to market

Crisis-suppressed logistics series revert slowly; citing the suppression mechanism justified the divergence and the critic passed it. Continue anchoring maritime-flow markets on the mechanism, but state the recovery base rate explicitly.

2026-07-18 | resolution | KXHORMUZNORM-26MAR17-B260701 | politics [mechanism-anchored-win]

Brier (mine): 0.0010 | Brier (market): 0.0045 | beat market

Never emit 0.0 on a multi-week human-decision window. A first-time candidate dropping out over ~6 months has a base rate of several percent regardless of current reporting; floor tails at the base rate and never price below the market on a tail without documented cause.

2026-07-18 | resolution | KXPLATNERDROPOUT-26 | politics [zero-probability-tail]

Brier (mine): 0.9409 | Brier (market): 0.9158 | lost to market

On tight CPI/threshold buckets near the distribution mode, do not diverge from market price unless ≥3 independent sources justify it; otherwise anchor closer to the market.

2026-07-17 | resolution | KXCPI-26JUN-T-0.1 | economy [process-ci-sources]
Brier (mine): 0.1296 | Brier (market): 0.0930 | lost to market

Even on easy directional threshold calls, state the base rate and a rough confidence interval in the rationale so the record is auditable.

2026-07-17 | resolution | KXCPI-26JUN-T0.1 | economy [process-ci-sources]
Brier (mine): 0.0100 | Brier (market): 0.0182 | beat market

Even on high-confidence near-certain markets, write the base rate, an explicit confidence interval, and 3 named independent sources into the rationale so the reasoning is auditable — accuracy was fine, documentation was thin.
