

Superforecaster — Kalshi Soft Markets

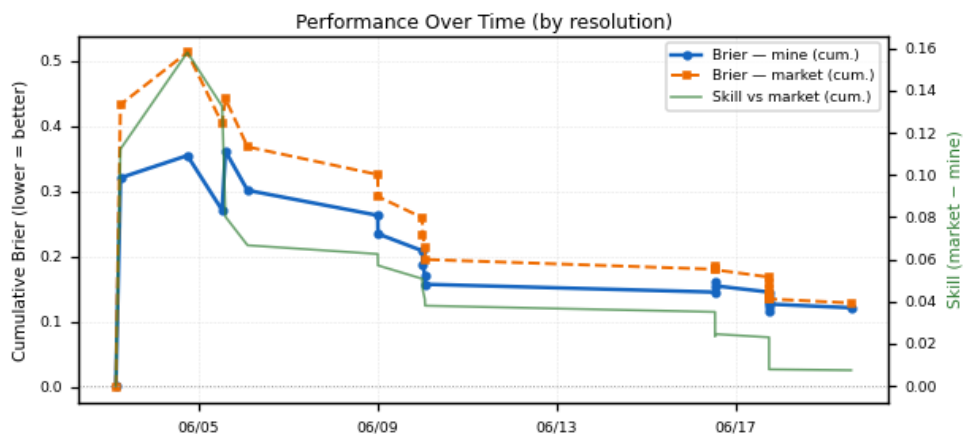

Generated: 2026-06-22T14:10:30Z

Metric	Value
Active markets	30
Resolved markets	22
Total forecast entries	116
Profitable leans (after fees)	2
Resolved with calibration	22
Brier (mine, mean)	0.1209
Brier (market, mean)	0.1283
Skill vs market	0.0074

Performance Over Time

Resolved: **22** Brier (mine): **0.121** vs market **0.128** Skill: **+0.007** (beating the market)

Provisional — only 22 resolved market(s). A skill gap is not statistically distinguishable from luck below ~30 resolutions; read the trend, not the point estimate.

Where the edge is — by segment

Strongest: **politics / us-governor-primary** (skill +0.074, n=3). Weakest: **economy / fed-rates** (skill -0.034, n=6).

By category

Category	n	Brier (mine)	Brier (mkt)	Skill
politics	15	0.153	0.174	+0.021
economy	7	0.051	0.030	-0.021

By sub-category

Category / sub-category	n	Brier (mine)	Brier (mkt)	Skill
politics / foreign-election	1	0.423	0.672	+0.250
politics / us-governor-primary	3	0.214	0.289	+0.074
economy / jobs-unemployment	1	0.020	0.076	+0.056

politics / mayoral	2	0.034	0.063	+0.028
politics / us-governor	1	0.000	0.000	+0.000
politics / legislation	1	0.002	0.000	-0.002
politics / foreign-policy	3	0.145	0.116	-0.029
politics / us-senate	4	0.183	0.150	-0.033
economy / fed-rates	6	0.057	0.023	-0.034

Profit & Loss (realized)

Resolved trades: **5** Realized P&L: **-\$0.60** per contract ROI: **-16.7%** Win rate: **60%**

Paper trade: buy the lean side at its entry ask, after Kalshi fees. A high win rate with negative ROI means winners are underpriced relative to the losers — calibration without profit.

By category

Category	Trades	P&L	ROI	Win%	MaxDD
economy	1	+\$0.25	+33.3%	100%	+\$0.00
politics	4	-\$0.85	-29.8%	50%	-\$0.85

Strategy Scoreboard

Every forecast is tagged with the strategy arm that produced it; resolutions score that arm on both Brier skill and realized profit. The topology is measured, not assumed.

Strategy	n	Brier	Skill	Trades	ROI
untagged	13	0.145	+0.035	4	-2.6%
L0-local-single	2	0.031	+0.020	0	—
S0-single	5	0.001	-0.000	0	—
S2-ensemble3-crowd	2	0.354	-0.165	1	-100.0%

Profitability — when does the edge pay? (counterfactual)

Every resolved forecast scored as a modal-side paper trade (22 total, vs only the taken leans in the realized section above). Overall counterfactual ROI: **-7.4%**, win rate 82%. The breakdowns below isolate **when** the strategy is profitable — the goal is profit, so this is the scoreboard that matters most.

Confidence gate: taken leans vs the ones we declined

Decision	n	CF P&L	CF ROI	Win%	MaxDD
taken	5	+\$0.32	+8.7%	80%	-\$0.80
gated/none	17	-\$1.76	-11.1%	82%	-\$1.79

By edge vs market (|my prob – market|) — where profit survives fees

Edge band	n	CF P&L	CF ROI	Win%	MaxDD
0-5pt	15	+\$0.76	+5.3%	100%	-\$0.01
5-10pt	3	-\$0.27	-11.9%	67%	-\$0.80
10-20pt	3	-\$1.53	-60.5%	33%	-\$1.78
20pt+	1	-\$0.39	-100.0%	0%	-\$0.39

By stated confidence — does confidence predict profit?

Confidence	n	CF P&L	CF ROI	Win%	MaxDD
high	14	+\$0.38	+2.8%	100%	-\$0.01
medium	5	-\$0.87	-22.5%	60%	-\$1.74
low	3	-\$0.94	-48.5%	33%	-\$0.94

By category

Category	n	CF P&L	CF ROI	Win%	MaxDD
economy	7	-\$0.11	-1.8%	86%	-\$0.39
politics	15	-\$1.33	-10.0%	80%	-\$2.59

By strategy arm

Strategy	n	CF P&L	CF ROI	Win%	MaxDD
L0-local-single	2	+\$0.29	+17.0%	100%	+\$0.00
S2-ensemble3-crowd	2	+\$0.03	+3.1%	50%	-\$0.39
S0-single	5	+\$0.03	+0.6%	100%	+\$0.00
untagged	13	-\$1.79	-15.2%	77%	-\$2.34

Open positions — expected P&L (forward-looking)

Forward-looking expected P&L on **63** open modal-side positions (mark-to-model): **-\$0.51/contract** total (24 are +EV). Of that, **+\$0.88** is on actionable leans (the rest is counterfactual — positions the confidence gate is holding us out of).

Provisional — 22 resolved. Profit ROI is even noisier than Brier at small n; read the direction, not the digits.

Autonomous Learning — policy & proposals

The decision policy (when to take a position) is data, not frozen code. The learning pass reads the system's own resolved record and proposes nudges, but anti-overfit guardrails (min-n, max-step) gate every change. **Policy v1**; proposals as of 2026-06-22.

Knob (decision threshold)	Value
min profitable EV (\$/contract)	0.020
max market-fade gap (no-high-conf)	0.200
conviction medium / high EV	0.05 / 0.12
low confidence never leans	True
adversarial veto binding	True

Pending proposals (from the system's own outcomes)

Knob	Current → Proposed	n	Guardrail	Rationale
max_market_disagreement	0.2 → 0.1	4	INSUFFICIENT_DATA	Counterfactual ROI negative in 10-20pt, 20pt+ -> wide fades lose; tighten
low_confidence_never_leans	True → True	19	INSUFFICIENT_DATA	medium-confidence trades lose while high-confidence profit -> consider g
adversarial_veto_binding	True → None	1	INSUFFICIENT_DATA	No resolved positions carry an adversarial verdict yet — the gate is new.

INSUFFICIENT_DATA = directionally real but too few samples to trust; HUMAN_GATE = change too large to auto-apply; AUTO_OK = guardrail-cleared, auto-applied. Nothing auto-applies until the record is large enough.

Active Markets

Will Toby Doeden be the Republican nominee for Governor in South Dakota?

(KXGOVSDNOMR-26-TDOE)

Category: politics | Closes: 2026-06-30 14:00 UTC

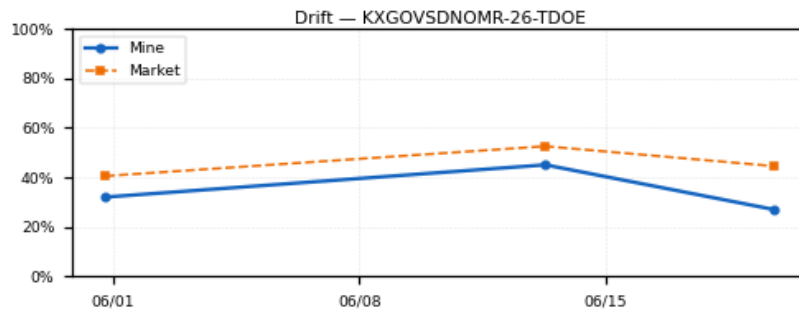

My prob: **27.0%** Confidence: **medium** Market: **44.5%** Edge: **-17.5%**

Lean: **NO** Conviction: **high**

Trade (spot): BUY NO @ \$0.56 now (taker, fee \$0.02/contract) -> net EV **+\$0.15/contract**

Rationale: SD primary Jun 2 hit no 35% threshold; 2-way Jul 28 runoff Doeden (31% plurality) vs incumbent Gov Rhoden (25%). ~69% did not back Doeden; anti-Doeden (Johnson) base expected to consolidate behind incumbent. Doeden a clear underdog with intense base.

Key drivers: Jul 28 runoff vs incumbent Rhoden; 69% did not back Doeden; Johnson voters consolidate to Rhoden; Doeden base intensity in low-turnout runoff

Will the Federal Reserve Hike rates by 0bps at their July 2026 meeting?

(KXFEDDECISION-26JUL-H0)

Category: economy | Closes: 2026-07-29 18:05 UTC

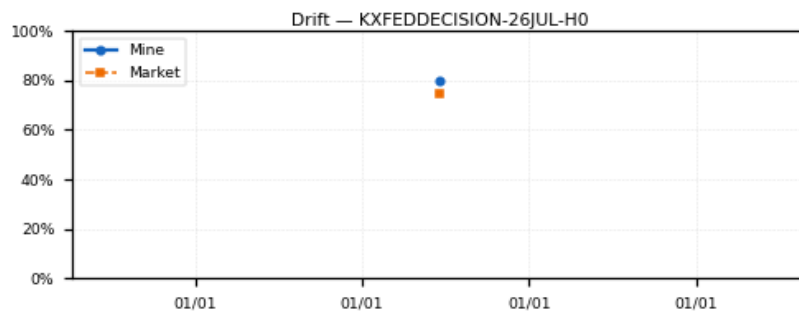

My prob: **80.0%** Confidence: **medium** Market: **74.5%** Edge: **5.5%**

Lean: **YES** Conviction: **low**

Trade (spot): BUY YES @ \$0.75 now (taker, fee \$0.02/contract) -> net EV **+\$0.03/contract**

Rationale: June was a UNANIMOUS hold; next-meeting persistence after a unanimous hold is ~85%. The 9/8 dot split is full-year, not July-specific (any hike can land later). Persistent 3.6% PCE removes cut risk but Fed signaled patience. ~0.80, slightly above market 0.745 (which folds path risk into one meeting).

Key drivers: unanimous June hold -> high next-meeting persistence; dot split is full-year not July; PCE persistence biases alt to hike not cut; market underweights single-meeting inertia

Supergirl Rotten Tomatoes score? (KXRT-SUPE-75)

Category: culture | Closes: 2026-06-22 14:00 UTC

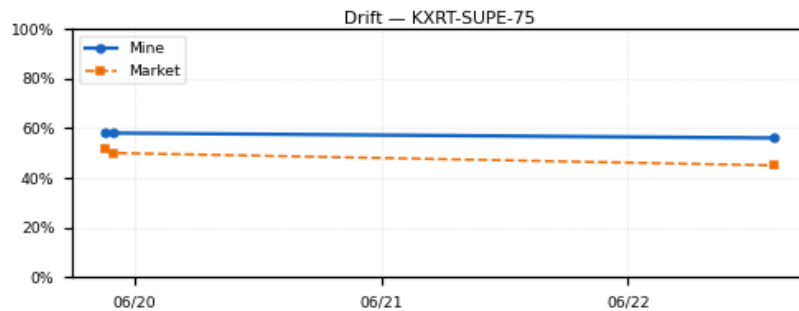

My prob: **56.0%** Confidence: **low** Market: **45.0%** Edge: **11.0%**

Lean: **NONE** Conviction: **low**

No actionable lean: low confidence — estimate too uncertain to fade the market (Indicative raw EV +\$0.08/contract at my probability, not recommended.)

Rationale: No critic score yet (embargo lifts Jun 24); only signal is a soft pre-embargo crowd estimate ~76 sitting one point above the >75 threshold — near coin-flip. Positive trend 68->76 and favorable Gunn-era DC comps (Superman 83, FF 86) nudge slightly above even; market implies ~45%.

Key drivers: pre-embargo crowd estimate ~76; threshold 1pt below estimate; wide unreleased-film variance; Gunn-era DC comps; trend 68->76

The Odyssey Rotten Tomatoes score? (KXRT-ODY-90)

Category: culture | Closes: 2026-07-20 14:00 UTC

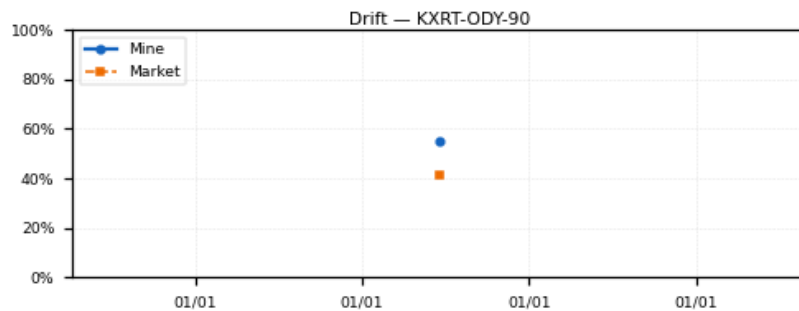

My prob: **55.0%** Confidence: **low** Market: **41.5%** Edge: **13.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: low confidence — estimate too uncertain to fade the market (Indicative raw EV +\$0.07/contract at my probability, not recommended.)

Rationale: Unreleased (Jul17), zero reviews -> base-rate call. Nolan ~3/6 >=90% (Oppenheimer 93, Dunkirk 92, Memento 95 vs Inception 87, Interstellar 73, Tenet 69); mythic-prestige register matches his >=90 films, nudged up, but the bright-line 90% + large critic pool dilution cap it. ~0.55.

Key drivers: Nolan base rate ~50% >=90; register matches Oppenheimer/Dunkirk; 90% bright line demanding; big critic pool dilutes

Will Adriano Espaillat be the Democratic nominee for NY-13? (KXNY13D-26-AESP)

Category: politics | Closes: 2026-06-30 14:00 UTC

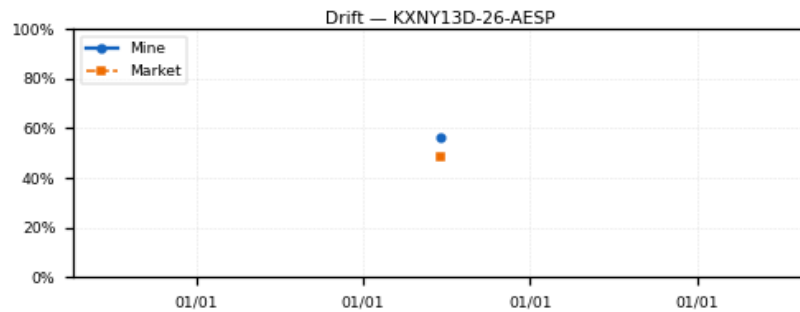

My prob: **56.0%** Confidence: **low** Market: **48.5%** Edge: **7.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: low confidence — estimate too uncertain to fade the market (Indicative raw EV +\$0.05/contract at my probability, not recommended.)

Rationale: House incumbents win primaries ~95%, but a single progressive-leaning DfP poll has Espaillat down 35-39 (inside MoE) and the Mamdani-backed challenger has real GOTV; broader market ~coin flip. Discount the base rate sharply but keep the incumbent machine floor -> ~0.56, low confidence.

Key drivers: 95% incumbent base rate; single biased poll down 4 inside MoE; Mamdani GOTV downside; low-turnout favors machine

Will CPI rise more than 0.1% in June 2026? (KXCPI-26JUN-T0.1)

Category: economy | Closes: 2026-07-14 13:56 UTC

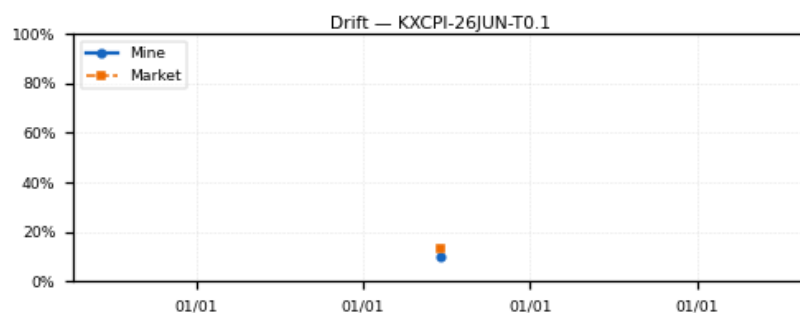

My prob: **10.0%** Confidence: **medium** Market: **13.5%** Edge: **-3.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: ADVERSARIAL VETO: Forecaster's edge depends on unproven assumptions about geopolitical events and energy markets, diverging from liquid market pricing. Confidence is inflated relative to market odds, and reasoning neglects base rates and alternative inflatio (Indicative raw EV +\$0.02/contract at my probability, not recommended.)

Rationale: >+0.1% needs energy NOT to reverse AND firm core — a conjunction against the central case (post-ceasefire energy reversal drags June headline toward zero/negative). Must be $\leq P(>0.0\%) - 0.125$; anchor modestly below for retail-gas downward stickiness. ~0.10.

Key drivers: energy reversal drag dominant; conjunctive bar (energy+core); coherence ceiling $\leq P(>0.0\%)$; retail-gas stickiness upside

Will Donald J. Trump attend The 2026 FIFA World Cup Final? (KXTRUMPATTEND)

Category: politics | Closes: 2026-07-20 14:00 UTC

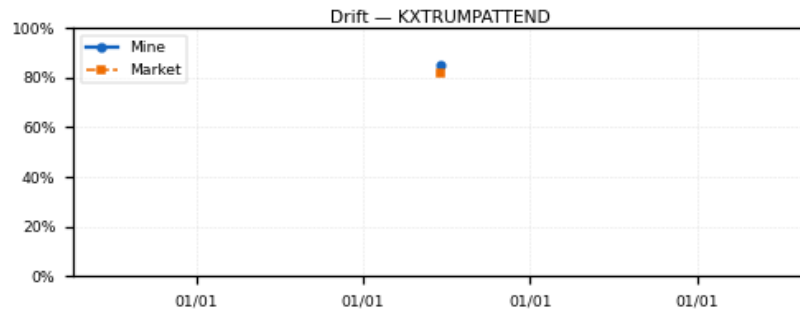

My prob: **85.0%** Confidence: **medium** Market: **81.5%** Edge: **3.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean YES (my prob 85%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast). (Indicative raw EV +\$0.01/contract at my probability, not recommended.)

Rationale: Trump plans to attend (WH 'holding' his schedule); FIFA wants him to present the trophy; precedent at Club World Cup; marquee US-hosted event he is motivated to attend. Residual scheduling/security/health risk a month out.

Key drivers: WH holding the date; FIFA trophy-presentation role; Club World Cup precedent; strong personal motivation

Will the President sign more than 0 Executive Orders between Jun 7, 2026 and Jun 13, 2026? (KXEOWEEK-26JUN13-0)

Category: politics | Closes: 2026-06-27 14:00 UTC

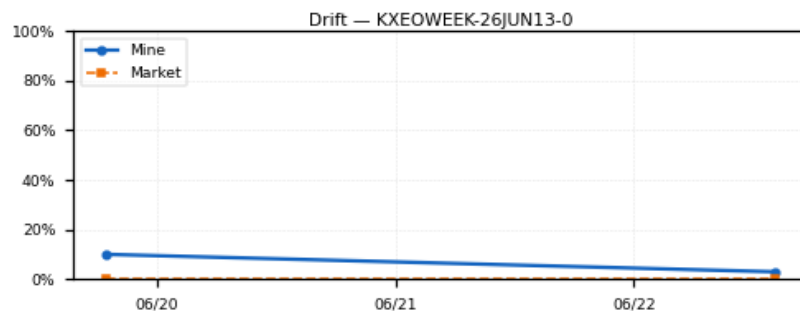

My prob: **3.0%** Confidence: **high** Market: **0.5%** Edge: **2.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 3%, modal NO) — staying out. (Indicative raw EV +\$0.01/contract at my probability, not recommended.)

Rationale: Federal Register API verified: the latest June EOs are 14409-14411 (signed Jun 2-3); ZERO Executive Orders carry a signing date inside Jun 7-13, 2026. The base-rate-only 0.69 is overridden by direct verification. Now 9+ days past the window, an unpublished in-window EO is highly unlikely. Resolves NO; market at 0.5c is correct. Modal = NO.

Key drivers: Federal Register verified zero EOs Jun 7-13; latest EO 14411 dated Jun 3; base rate overridden by direct check; publication essentially complete

Will Iván Cepeda Castro win the next Colombian presidential election?

(KXCOLOMBIAPRES-26-ICAS)

Category: politics | Closes: 2026-06-25 04:00 UTC

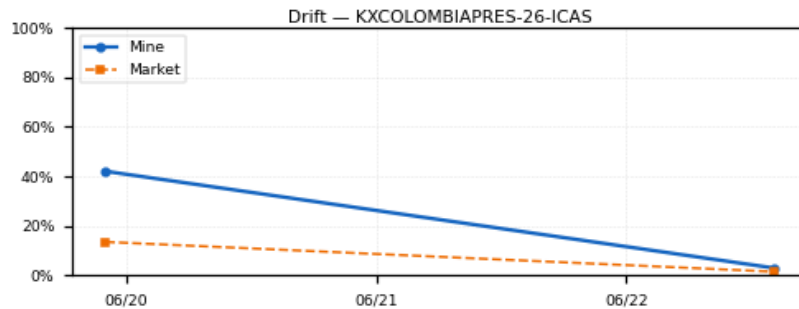

My prob: **3.0%** Confidence: **high** Market: **1.5%** Edge: **1.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 3%, modal NO) — staying out. (Indicative raw EV +\$0.00/contract at my probability, not recommended.)

Rationale: Declared loser of the June 21 runoff by ~0.95pt; de la Espriella already named president-elect. Modern democracies essentially never overturn a declared narrow presidential result via post-hoc challenge; his vow to challenge is non-diagnostic boilerplate. Thin residual for 'preliminary' count. Modal = NO.

Key drivers: ~0.95pt declared loss; de la Espriella president-elect; near-zero overturn base rate; vow-to-challenge non-diagnostic; count preliminary

Will Graham Platner drop out of the 2026 United States Senate election in Maine before Jul 14, 2026?

(KXPLATNERDROPOUT-26)

Category: politics | Closes: 2026-07-14 14:00 UTC

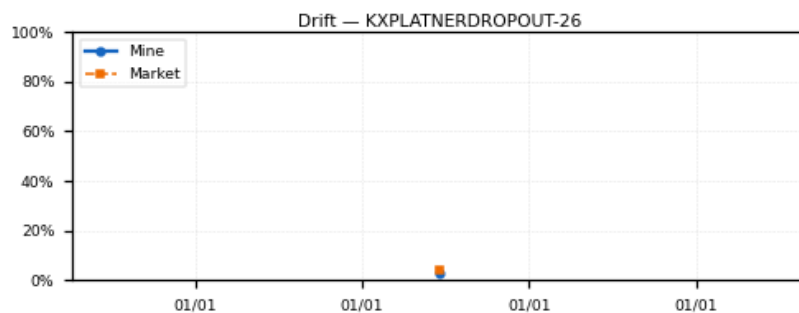

My prob: **3.0%** Confidence: **medium** Market: **4.3%** Edge: **-1.3%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 3%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast). (Indicative raw EV +\$0.00/contract at my probability, not recommended.)

Rationale: Presumptive nominee, uncontested primary (Mills suspended), explicitly refusing to withdraw and claiming strength despite controversies. Frontrunner voluntary exit in a ~3.5wk window is ~1-3%; small tail for escalating scandal/party pressure.

Key drivers: explicit refusal to withdraw; uncontested primary; narrow window; unevidenced scandal tail

Will Marco Rubio visit Iran before Jul 1, 2026? (KXVISITIRAN-26JUL01-MRUB)

Category: politics | Closes: 2026-07-01 14:00 UTC

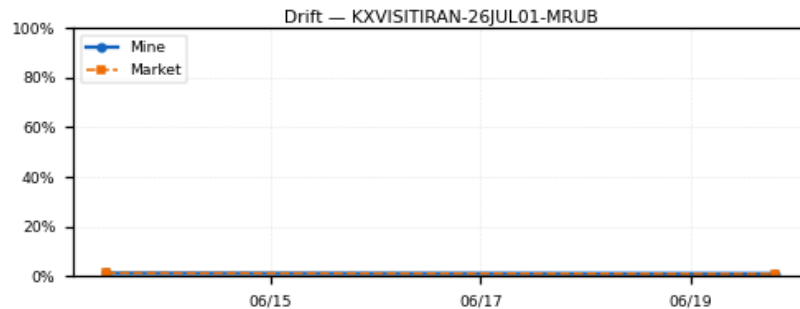

My prob: **1.0%** Confidence: **high** Market: **0.9%** Edge: **0.1%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 1%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: No US Secretary of State has visited Iran since 1979; 2026 talks held in neutral venues (Geneva); no plan to travel to Tehran.

Key drivers: no SoS visit since 1979; neutral-venue talks; no Tehran plan

Will the 7-day moving average of transit calls through the Strait of Hormuz as reported by the IMF PortWatch be above 60 before July 1, 2026? (KXHORMUZNORM-26MAR17-B260701)

Category: politics | Closes: 2026-06-15 14:00 UTC

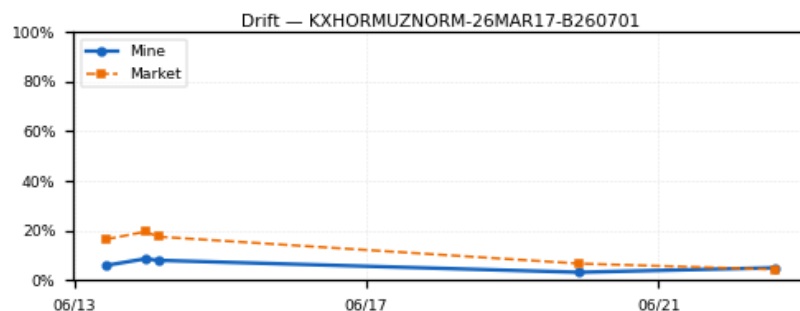

My prob: **5.0%** Confidence: **medium** Market: **4.3%** Edge: **0.7%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 5%, modal NO) — staying out.

Rationale: PortWatch reported ~0 transits as recently as Jun 14, so the 7-day MA sits near zero; it cannot mechanically exceed 60 within ~8-9 days unless near-baseline (~90/day) traffic resumes almost immediately AND sustains a week AND PortWatch captures it without lag. AIS spoofing/dark vessels bias reported counts low. Small tail for fast MOU-driven reopening + data backfill. Modal = NO.

Key drivers: 7d MA lags and cannot jump from ~0 to >60 fast; only ~8-9 days left; strait still declared closed; PortWatch undercount bias; Jun18 MOU upside tail

Will JD Vance visit Iran before Jul 1, 2026? (KXVISITIRAN-26JUL01-JVAN)

Category: politics | Closes: 2026-07-01 14:00 UTC

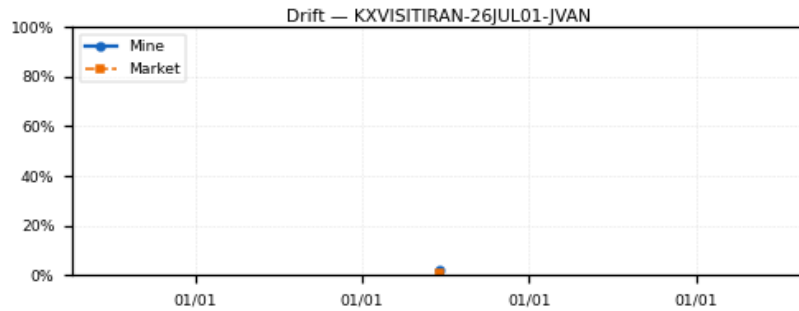

My prob: **2.0%** Confidence: **medium** Market: **1.1%** Edge: **0.9%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 2%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: Vance's stated plan is Switzerland, not Iran; no US VP has visited Iran since 1979; talks in neutral venues.

Key drivers: Vance plan is Switzerland not Iran; no VP visit since 1979; neutral venues

Will the unemployment rate (U-3) be above 4.1% in June? (KXU3-26JUN-T4.1)

Category: economy | Closes: 2026-07-02 14:00 UTC

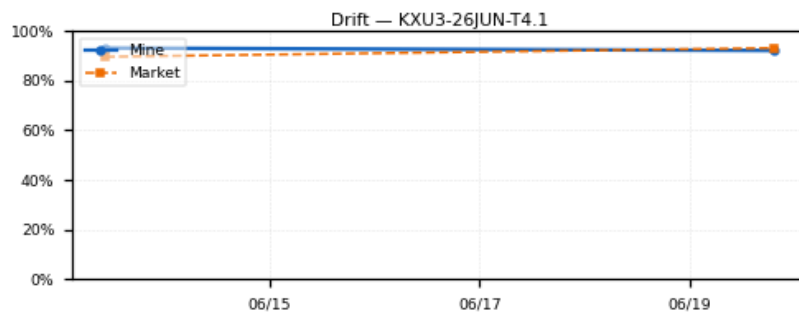

My prob: **92.0%** Confidence: **high** Market: **93.0%** Edge: **-1.0%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean YES (my prob 92%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: May 2026 U-3 = 4.3%, in a 4.3-4.5% range since Jul 2025; no sign of a drop below 4.1% in June. Very likely above 4.1%.

Key drivers: May 4.3%; stable 4.3-4.5% range; no rapid improvement

Will Trump make 2 trips to Mar-a-Lago as President in Jun 2026? (KXLAGODAYS-26JUN-2)

Category: politics | Closes: 2026-06-30 14:00 UTC

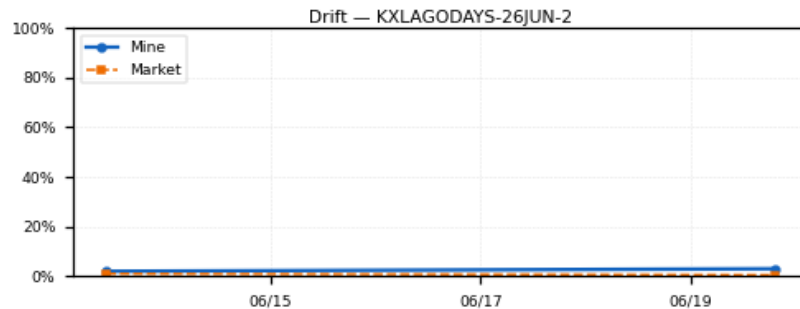

My prob: **3.0%** Confidence: **medium** Market: **0.5%** Edge: **2.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 3%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: Two June Mar-a-Lago trips highly unlikely given summer Bedminster pattern + Iran war in DC; corrected down from incoherent local estimate.

Key drivers: summer Bedminster; Iran war; 2 trips needs unlikely double travel

Will Abelardo de la Espriella win the next Colombian presidential election? (KXCOLOMBIAPRES-26-AESP)

Category: politics | Closes: 2026-06-25 04:00 UTC

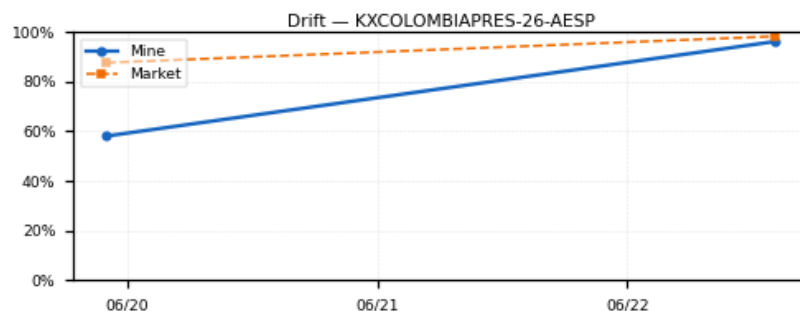

My prob: **96.0%** Confidence: **medium** Market: **98.1%** Edge: **-2.1%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 96%, modal YES) — staying out.

Rationale: Declared winner of the June 21 runoff (preliminary 49.65% vs Cepeda 48.70%, ~0.95pt, record 12.9M votes). Declared narrow presidential results are essentially never reversed by a loser's challenge (Mexico 2006, Peru 2021, US 2000/2020 held); ~1pt margin is recount-proof. Small residual for preliminary/contested status. Modal = YES; no fade of an even-higher market.

Key drivers: declared winner + record turnout; ~0.95pt recount-proof margin; near-zero overturn base rate; vow-to-challenge non-diagnostic; results preliminary

Will any U.S. House member visit Iran before Jul 1, 2026? (KXVISITIRAN-26JUL01-AHOU)

Category: politics | Closes: 2026-07-01 14:00 UTC

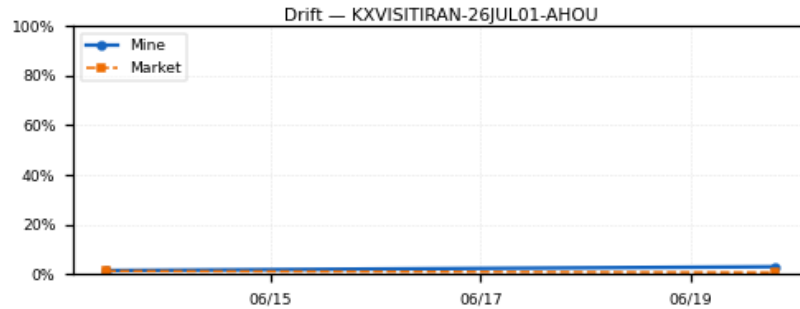

My prob: **3.0%** Confidence: **medium** Market: **0.7%** Edge: **2.3%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 3%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: All US-Iran engagement is in neutral venues (Geneva/Switzerland/Rome), not Tehran; no House member traveling to Iran; physically near-unprecedented. Corrected down from local overestimate.

Key drivers: talks in neutral venues not Tehran; no House travel to Iran; near-unprecedented

Will the US agree to a new Iranian nuclear deal this year? (KXUSAIRANAGREEMENT-27-26JUL)

Category: politics | Closes: 2026-07-01 14:00 UTC

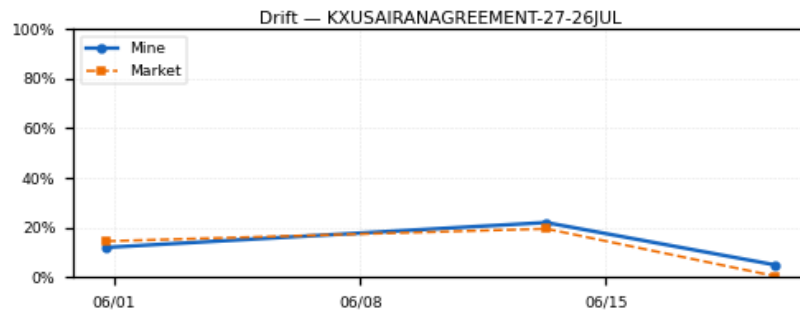

My prob: **5.0%** Confidence: **medium** Market: **0.5%** Edge: **4.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 5%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: June 14-19 MOU is explicitly a roadmap, not a nuclear deal; opens a 60-day nuclear negotiation window ending ~mid-August — after the July 1 close. Talks contentious (missiles, rebuilding).

Key drivers: MOU is roadmap not deal; 60-day window ends mid-Aug past close; contentious nuclear talks

Will legislation that reauthorizes FISA Section 702 authority become law before Jun 25, 2026? (KXFISAEXTEND-26JUN-26JUN25)

Category: politics | Closes: 2026-07-01 14:00 UTC

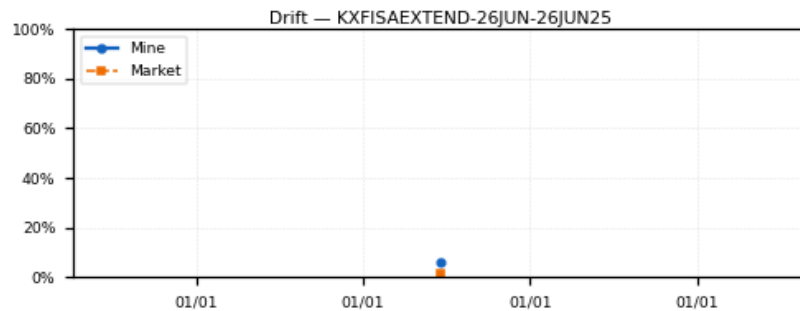

My prob: **6.0%** Confidence: **medium** Market: **1.5%** Edge: **4.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 6%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: 702 in active lapse: House failed short extension 198-218, Senate stalled 47-52, 'lapse assured', Dems blocking over Pulte DNI. No path to law in 6 days.

Key drivers: House extension failed 198-218; Senate motion failed 47-52; program lapsed; Pulte standoff

Will CPI rise more than -0.1% in June 2026? (KXCPI-26JUN-T-0.1)

Category: economy | Closes: 2026-07-14 13:56 UTC

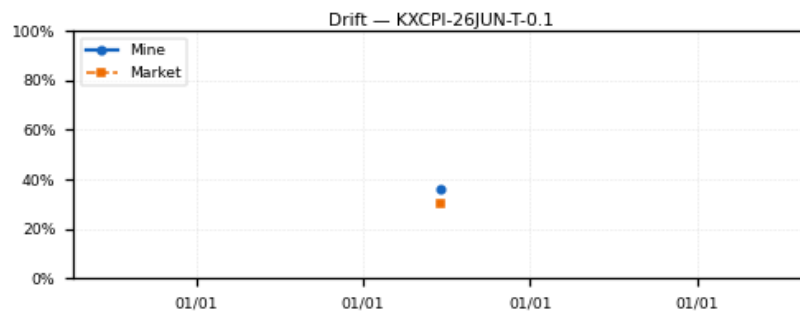

My prob: **36.0%** Confidence: **low** Market: **30.5%** Edge: **5.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 36%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: Post-ceasefire energy reversal drags June headline, but the Jun14 ceasefire only affects the back half of the month (partial/lagged gasoline passthrough) and core ~+0.2% offsets, so headline may land closer to -0.1%/0.0% than the market's deeply-negative center. Lean modestly above market 0.30.

Key drivers: energy reversal drag; mid-month ceasefire blunts June average; sticky core offsets; knife-edge threshold

Will Trump make 1 trips to Mar-a-Lago as President in Jun 2026? (KXLAGODAYS-26JUN-1)

Category: politics | Closes: 2026-06-30 14:00 UTC

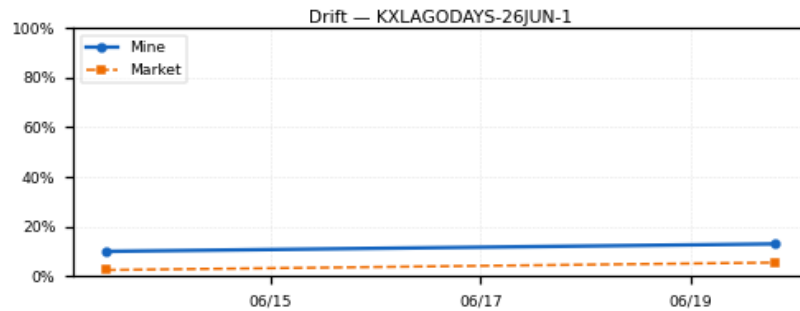

My prob: **13.0%** Confidence: **medium** Market: **5.5%** Edge: **7.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 13%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: Coherence with P(0 trips)~0.82: residual mass for exactly 1 trip is modest. Summer/war suppress Florida travel.

Key drivers: coherence with high P(0); summer suppression of FL travel

Will Trump make 0 trips to Mar-a-Lago as President in Jun 2026? (KXLAGODAYS-26JUN-0)

Category: politics | Closes: 2026-06-30 14:00 UTC

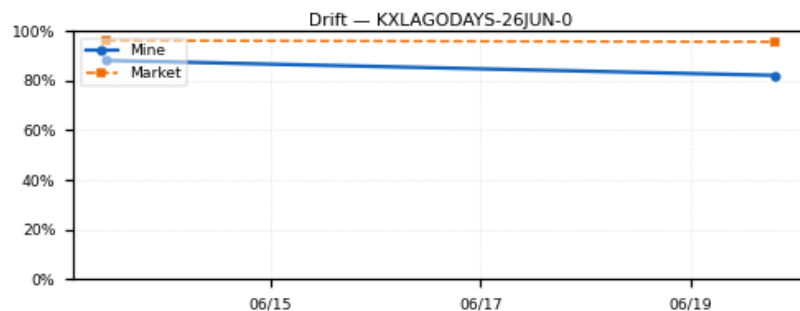

My prob: **82.0%** Confidence: **medium** Market: **95.5%** Edge: **-13.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean YES (my prob 82%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: Summer = Bedminster not Mar-a-Lago (skips Florida heat); Iran war kept him in DC through the June 14 ceasefire; no reported June trip. 0 trips most likely.

Key drivers: summer Bedminster preference; Iran war kept him in DC; no reported June trip

CPI year-over-year in Jun 2026? (KXECONSTATCPIYOY-26JUN-T3.9)

Category: economy | Closes: 2026-07-14 14:00 UTC

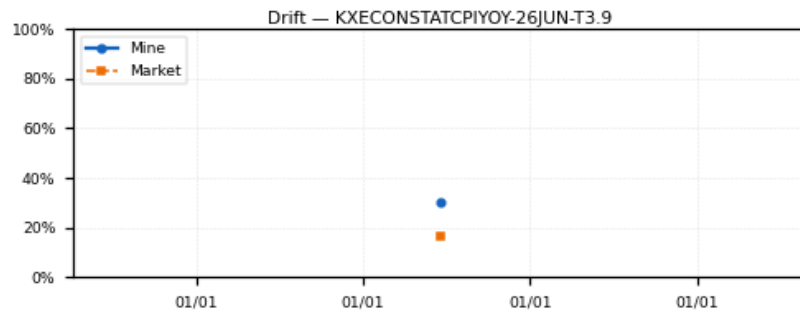

My prob: **30.0%** Confidence: **low** Market: **16.5%** Edge: **13.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 30%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: May YoY 4.2%; >3.9% needs YoY NOT to fall ~0.3pp in one month. Energy passthrough timing (mid-month ceasefire, lagged gasoline) means most relief hits July not June, and sticky shelter/food anchor near 4.0-4.1%. Market 0.17 likely overconfident on fast June passthrough; lean above to 0.30 but still below even.

Key drivers: needs 0.3pp 1-month drop; passthrough hits July not June; sticky shelter floor; market overconfident on speed

CPI year-over-year in Jun 2026? (KXECONSTATCPIYOY-26JUN-T4.1)

Category: economy | Closes: 2026-07-14 14:00 UTC

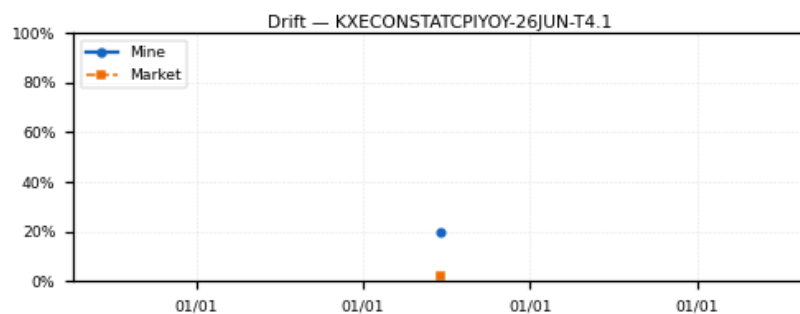

My prob: **20.0%** Confidence: **low** Market: **2.0%** Edge: **18.0%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 20%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: May YoY 4.2%, only 0.1pp above the 4.1% threshold; post-ceasefire energy reversal makes a sub-4.1% June print quite achievable. Local model (0.65) under-weighted that; the two CPI markets coherently price a sharp June disinflation, so I defer substantially while keeping residual chance energy doesn't fully reverse within June.

Key drivers: May YoY 4.2% only 0.1pp over threshold; energy reversal; coherent disinflation signal across both CPI markets

Will Mike Mazzei be the Republican nominee for Governor in Oklahoma?

(KXGOVOKNOMR-26-MMAZ)

Category: politics | Closes: 2026-06-30 14:00 UTC

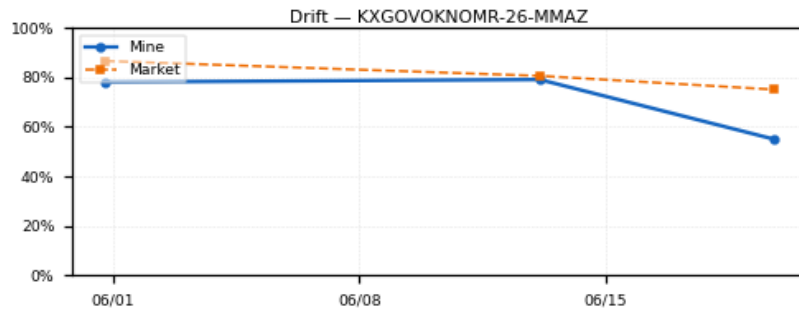

My prob: **55.0%** Confidence: **medium** Market: **75.0%** Edge: **-20.0%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean YES (my prob 55%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: OK primary already held Jun 16; now a 2-way Aug 25 runoff Drummond (26.3%) vs Mazzei (26.0%). Mazzei has Trump endorsement + favorable transfer of Merrick's America-First bloc; Drummond led R1 with higher statewide name ID. Net slight Mazzei edge.

Key drivers: Aug 25 runoff after near-tie R1; Trump endorsement of Mazzei; Merrick bloc transfers to Mazzei; Drummond incumbent-AG name ID

Will Genter Drummond be the Republican nominee for Governor in Oklahoma?

(KXGOVOKNOMR-26-GDRU)

Category: politics | Closes: 2026-06-30 14:00 UTC

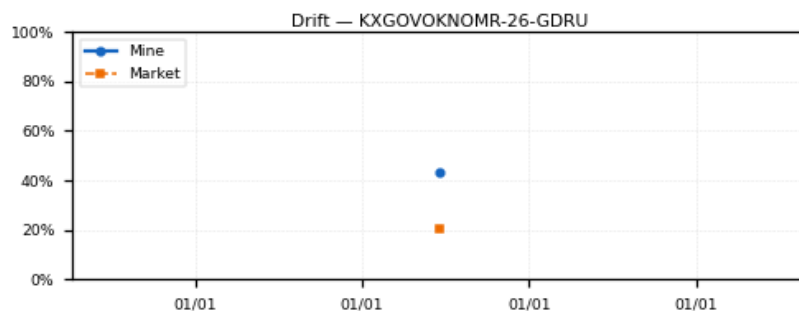

My prob: **43.0%** Confidence: **low** Market: **20.5%** Edge: **22.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 43%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: 2-way Aug25 runoff after a 0.3pt R1 tie (Drummond first). Freed America-First Merrick bloc + Trump endorsement + low-turnout runoff tilt modestly to Mazzei; Drummond offsets via top name ID + institutional backing. Slightly below even (~0.43).

Key drivers: R1 was 0.3pt tie; Merrick bloc leans Mazzei; Trump endorsement+low turnout favor insurgent; Drummond name ID offsets

Will CPI rise more than 0.0% in June 2026? (KXCPI-26JUN-T0.0)

Category: economy | Closes: 2026-07-14 13:56 UTC

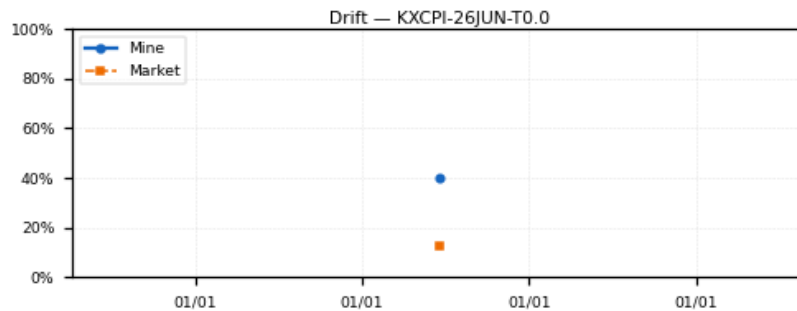

My prob: **40.0%** Confidence: **low** Market: **12.5%** Edge: **27.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: I lean NO (my prob 40%) but it isn't +EV at the ask — no value bet (betting the other side would contradict my forecast).

Rationale: Local model (0.75) under-weighted the post-ceasefire energy reversal: Hormuz reopened June 14, oil/gas falling, a major drag on June headline MoM after May's gas +40.5% spike. Liquid market prices ~87% chance of flat/negative MoM; deferring substantially toward that mechanism-backed signal while retaining upside from sticky core/shelter.

Key drivers: post-ceasefire oil/gas reversal drags headline; May gas spike unwinds; sticky positive core offsets; strong liquid-market disinflation signal

Will Trump say "Uranium" before Jun 22, 2026? (KXTRUMPSAY-26JUN22-URAN)

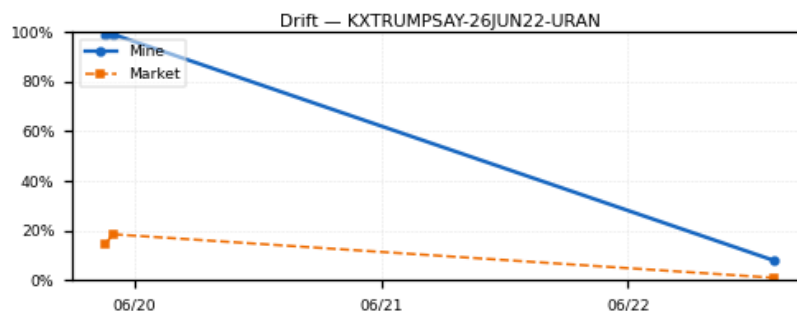

Category: statements | Closes: 2026-06-22 14:00 UTC

My prob: **8.0%** Confidence: **low** Market: **1.0%** Edge: **7.0%**

Lean: **NONE** Conviction: **low**

Rationale: Saying-window (Jun15-Jun22 00:00 ET) is CLOSED; the informed market priced ~1% right up to close, implying full-information trackers found no qualifying verbatim Trump 'uranium' quote. Despite peak Iran-nuclear coverage, every confirmed in-window Trump quote used a synonym ('nuclear/enriched material'); no verbatim quote confirmed. Heavily discounting an independent forecaster's notes-only 0.44 toward the closed-window settlement signal.

Key drivers: saying-window closed; informed market ~1% to close; no confirmed verbatim quote; Trump synonym-substitution all week; official/document mentions do not count

The Death of Robin Hood Rotten Tomatoes score? (KXRT-DEA-68)

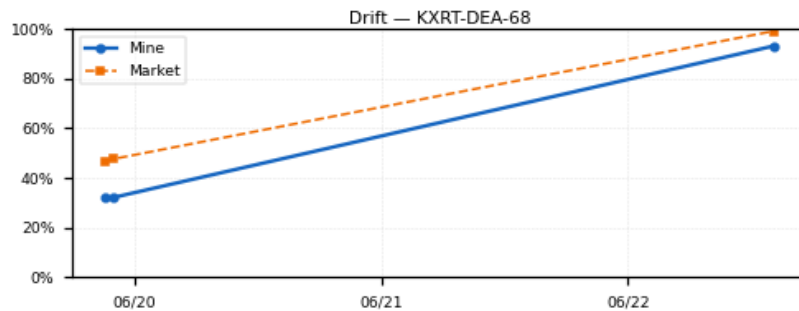

Category: culture | Closes: 2026-06-22 14:00 UTC

My prob: **93.0%** Confidence: **medium** Market: **99.0%** Edge: **-6.0%**

Lean: **NONE** Conviction: **low**

Rationale: Currently 70% on 97 reviews, two points above the >68 threshold and effectively locked; each marginal review moves a 97-denominator score ~1pt and base mix is ~70% fresh. Divisive reception widens the downside tail but central case holds at 69-70. Market closed/awaiting settlement.

Key drivers: 70% with 2pt cushion; high review count locks score; ~70% fresh marginal rate; divisive widens tail; resolution today

Toy Story 5 Rotten Tomatoes score? (KXRT-TOY-92)

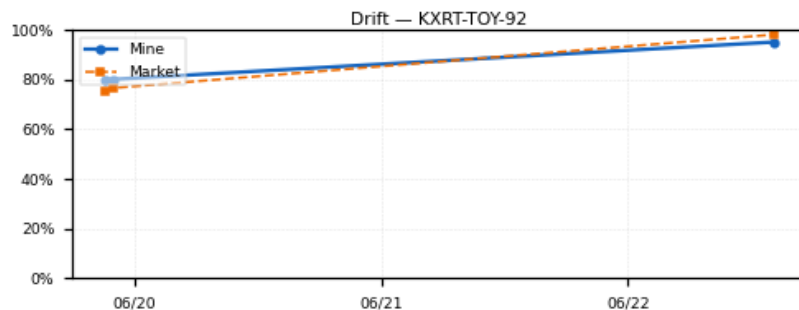

Category: culture | Closes: 2026-06-22 14:00 UTC

My prob: **95.0%** Confidence: **high** Market: **98.0%** Edge: **-3.0%**

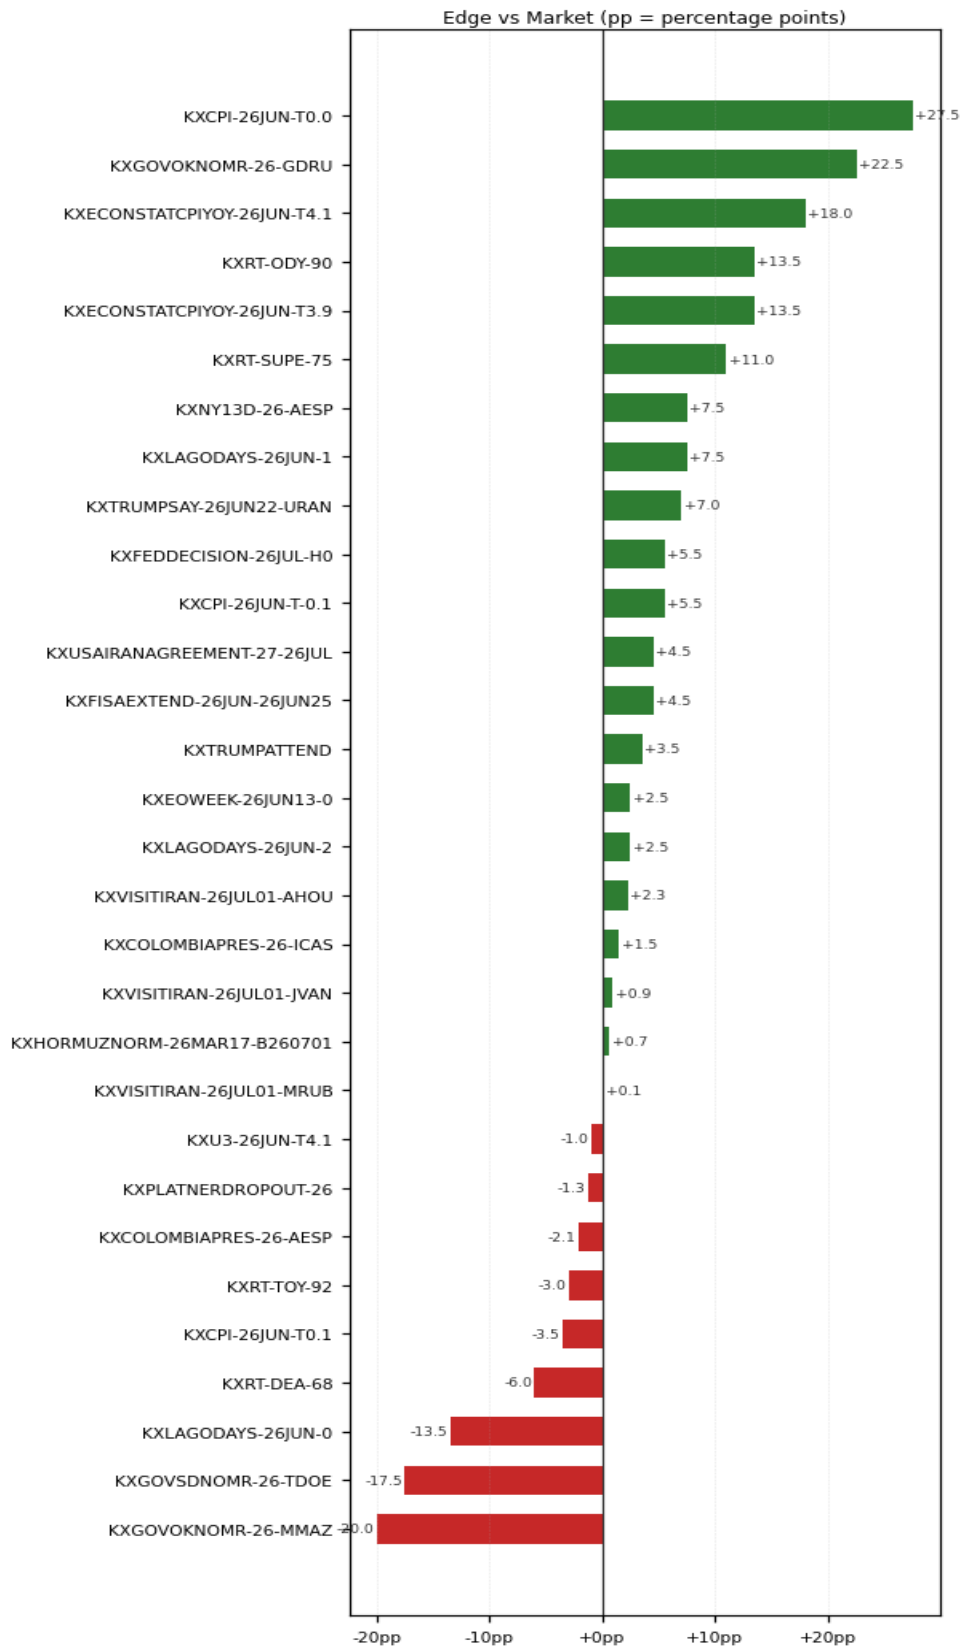

Lean: **NONE** Conviction: **low**

Rationale: Currently 93% Certified Fresh on ~97 reviews (raw ~92.8%), one point above the >92 threshold; with high review count and resolution today the score is statistically locked. Small residual NO risk from a late rotten cluster nudging it to exactly 92. Market closed/awaiting settlement.

Key drivers: high review count ~97; score settled 93% just above round threshold; resolution immediate; prior brief dip to 92%

Edge Overview

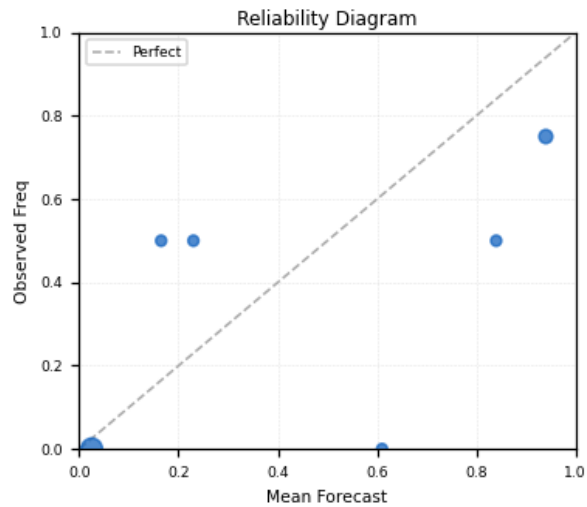

Profitable Leans (after fees)

Ticker	Side	Spot EV/contract	Limit EV/contract	Conviction
KXGOVSDNOMR-26-TDOENO	BUY	+\$0.15	—	high
KXFEDDECISION-26JUL-H0ES	BUY	+\$0.03	—	low

Fees use Kalshi's standard taker formula $\text{ceil}(0.07 \cdot p \cdot (1-p)) / \text{contract}$; resting (maker) limit fills may be cheaper on some series. Paper only - read-only key places no orders.

Lessons Learned

When diverging below a liquid market that is pricing a strong institutional base rate, require a specific, verifiable reason; narrative of 'division' is not evidence of a formally recorded dissent. Anchor on the base rate.

2026-06-19 | resolution | KXFOMCDISSENTCOUNT-26JUN-0 | economy [unjustified-market-divergence]
Brier (mine): 0.3364 | Brier (market): 0.1332 | lost to market

During an active supply-disruption crisis, anchor flow estimates to the SUPPRESSED regime, not an assumed recovery, until data confirms normalization; and do not enter a position when divergence from a liquid market is small and rests on an unverified assumption.

2026-06-19 | resolution | KXHORMUZWEEKLY-26JUN14-T25 | politics [unjustified-market-divergence]
Brier (mine): 0.3721 | Brier (market): 0.2450 | lost to market

Never move a forecast materially on one noisy data point (esp. a single poll); weight by reliability and require corroboration. Don't recommend fading a liquid market on a low-confidence estimate.
