Generated: 2026-06-23T20:48:19Z

Metric	Value
Active markets	27
Resolved markets	25
Total forecast entries	145
Profitable leans (after fees)	6
Resolved with calibration	25
Brier (mine, mean)	0.1657
Brier (market, mean)	0.1281
Skill vs market	-0.0376

Performance Over Time

Resolved: **25** Brier (mine): **0.166** vs market **0.128** Skill: **-0.038** (trailing the market)

Provisional — only 25 resolved market(s). A skill gap is not statistically distinguishable from luck below ~30 resolutions; read the trend, not the point estimate.

Where the edge is — by segment

Strongest: **politics / us-governor-primary** (skill +0.074, n=3). Weakest: **culture / box-office** (skill -0.078, n=2).

By category

Category	n	Brier (mine)	Brier (mkt)	Skill
politics	15	0.153	0.174	+0.021
economy	7	0.051	0.030	-0.021
culture	2	0.251	0.173	-0.078
statements	1	0.980	0.034	-0.946

By sub-category

Category / sub-category	n	Brier (mine)	Brier (mkt)	Skill
politics / foreign-election	1	0.423	0.672	+0.250

Profit & Loss (realized)

Resolved trades: **8** Realized P&L: **-\$1.19** per contract ROI: **-22.9%** Win rate: **50%**

Paper trade: buy the lean side at its entry ask, after Kalshi fees. A high win rate with negative ROI means winners are underpriced relative to the losers — calibration without profit.

By category

Category	Trades	P&L	ROI	Win%	MaxDD
economy	1	+\$0.25	+33.3%	100%	+\$0.00
culture	2	-\$0.36	-26.5%	50%	-\$0.58
politics	4	-\$0.85	-29.8%	50%	-\$0.85
statements	1	-\$0.23	-100.0%	0%	-\$0.23

Strategy Scoreboard

Every forecast is tagged with the strategy arm that produced it; resolutions score that arm on both Brier skill and realized profit. The topology is measured, not assumed.

Strategy	n	Brier	Skill	Trades	ROI
untagged	13	0.145	+0.035	4	-2.6%
L0-local-single	2	0.031	+0.020	0	—
S0-single	8	0.186	-0.138	3	-37.1%
S2-ensemble3-crowd	2	0.354	-0.165	1	-100.0%

Profitability — when does the edge pay? (counterfactual)

Every resolved forecast scored as a modal-side paper trade (25 total, vs only the taken leans in the realized section above). Overall counterfactual ROI: **-9.3%**, win rate 76%. The breakdowns below isolate **when** the strategy is profitable — the goal is profit, so this is the scoreboard that matters most.

Confidence gate: taken leans vs the ones we declined

Decision	n	CF P&L	CF ROI	Win%	MaxDD
taken	8	-\$0.20	-3.8%	62%	-\$0.80
gated/none	17	-\$1.76	-11.1%	82%	-\$1.79

By edge vs market (|my prob – market|) — where profit survives fees

Edge band	n	CF P&L	CF ROI	Win%	MaxDD
0-5pt	16	+\$0.98	+6.5%	100%	-\$0.01
5-10pt	3	-\$0.27	-11.9%	67%	-\$0.80
10-20pt	4	-\$2.11	-67.9%	25%	-\$2.11
20pt+	2	-\$0.55	-100.0%	0%	-\$0.55

By stated confidence — does confidence predict profit?

Confidence	n	CF P&L	CF ROI	Win%	MaxDD
high	15	+\$0.22	+1.6%	93%	-\$0.16
medium	7	-\$1.23	-23.6%	57%	-\$1.74
low	3	-\$0.94	-48.5%	33%	-\$0.94

By category

Category	n	CF P&L	CF ROI	Win%	MaxDD
economy	7	-\$0.11	-1.8%	86%	-\$0.39
politics	15	-\$1.33	-10.0%	80%	-\$2.59
culture	2	-\$0.36	-26.5%	50%	-\$0.58
statements	1	-\$0.16	-100.0%	0%	-\$0.16

By strategy arm

Strategy	n	CF P&L	CF ROI	Win%	MaxDD
L0-local-single	2	+\$0.29	+17.0%	100%	+\$0.00
S2-ensemble3-crowd	2	+\$0.03	+3.1%	50%	-\$0.39
S0-single	8	-\$0.49	-7.6%	75%	-\$0.58
untagged	13	-\$1.79	-15.2%	77%	-\$2.34

Open positions — expected P&L (forward-looking)

Forward-looking expected P&L on **63** open modal-side positions (mark-to-model): **-\$0.23/contract** total (22 are +EV). Of that, **+\$0.51** is on actionable leans (the rest is counterfactual — positions the confidence gate is holding us out of).

Provisional — 25 resolved. Profit ROI is even noisier than Brier at small n; read the direction, not the digits.

Autonomous Learning — policy & proposals

The decision policy (when to take a position) is data, not frozen code. The learning pass reads the system's own resolved record and proposes nudges, but anti-overfit guardrails (min-n, max-step) gate every change. **Policy v7**; proposals as of 2026-06-23.

Knob (decision threshold)	Value
min profitable EV (\$/contract)	0.020
max market-fade gap (no-high-conf)	0.050
conviction medium / high EV	0.05 / 0.12
low confidence never leans	True
adversarial veto binding	True

Pending proposals (from the system's own outcomes)

Knob	Current → Proposed	n	Guardrail	Rationale
------	--------------------	---	-----------	-----------

max_market_disagreement	0.05 → 0.05	25	INSUFFICIENT_DATA	Counterfactual ROI falls monotonically as the fade widens and is profitable
hard_gap_ceiling	0.2 → 0.2	25	INSUFFICIENT_DATA	The widest fades (20pt+) lost catastrophically (ROI<=-50%) -> lower the a
min_confidence_for_lean	medium → high	25	HUMAN_GATE	medium-confidence ROI -24% (n=7) while high-confidence profits 2% (n=
adversarial_veto_binding	True → None	4	INSUFFICIENT_DATA	Veto precision becomes learnable once vetoed/revised positions resolve;

INSUFFICIENT_DATA = directionally real but too few samples to trust; HUMAN_GATE = change too large to auto-apply; AUTO_OK = guardrail-cleared, auto-applied. Nothing auto-applies until the record is large enough.

Active Markets

Will Toby Doeden be the Republican nominee for Governor in South Dakota?

(KXGOVSDNOMR-26-TDOE)

Category: politics | Closes: 2026-06-30 14:00 UTC

My prob: 35.0% Confidence: high Market: 49.5% Edge: -14.5%

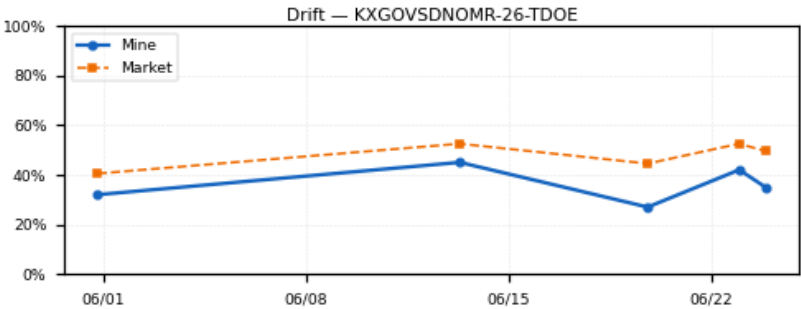

Lean: NO Conviction: high

Trade (spot): BUY NO @ \$0.51 now (taker, fee \$0.02/contract) -> net EV +\$0.12/contract

Trade (limit): rest BUY NO @ \$0.50 GTC until 2026-06-30 -> net EV +\$0.13/contract if filled

Rationale: Doeden's first-round lead (31% vs Rhoden's 25%) suggests initial momentum, but base rates indicate incumbents typically consolidate 60-70% in runoff primaries. Establishment backing shifting to Rhoden and Doeden's lack of Trump endorsement cap his ceiling at ~31%, while turnout dynamics remain uncer

Key drivers: Establishment backing consolidation toward Rhoden; Absence of Trump endorsement limiting Doeden's ceiling; Runoff turnout intensity favoring insurgent or incumbent

Supergirl Rotten Tomatoes score? (KXRT-SUPE-75)

Category: culture | Closes: 2026-06-22 14:00 UTC

My prob: 22.0% Confidence: high Market: 7.5% Edge: 14.5%

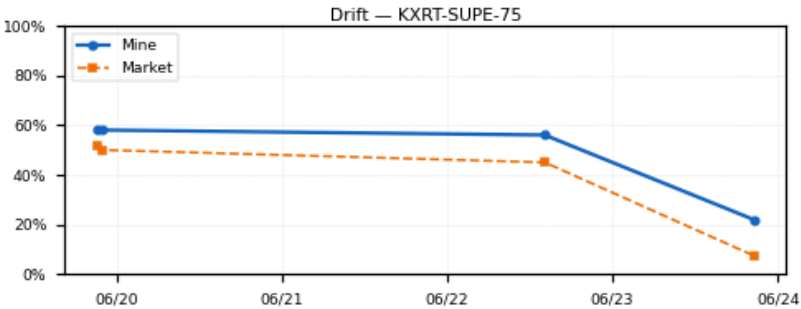

Lean: YES Conviction: high

Trade (spot): BUY YES @ \$0.09 now (taker, fee \$0.01/contract) -> net EV +\$0.12/contract

Trade (limit): rest BUY YES @ \$0.06 GTC until 2026-06-22 -> net EV +\$0.15/contract if filled

Rationale: Mixed-to-negative premiere reactions, comparable films scoring below 76%, and RT scores drifting downward with more reviews all weigh against a high score. Base rate suggests 15-25% chance for mixed pre-embargo films with a standout performance, but small-N volatility and embargo timing uncertainty

Key drivers: premiere reception; reference class scores; embargo timing; review volume growth

Will Mike Mazzei be the Republican nominee for Governor in Oklahoma?

(KXGOVOKNOMR-26-MMAZ)

Category: politics | Closes: 2026-06-30 14:00 UTC

My prob: **65.0%** Confidence: **high** Market: **77.5%** Edge: **-12.5%**

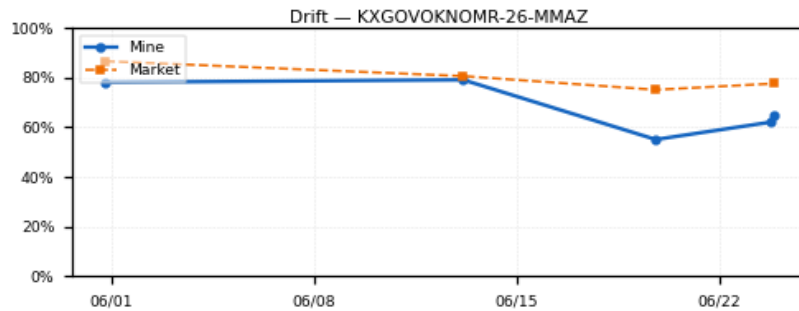

Lean: **NO** Conviction: **medium**

Trade (spot): BUY NO @ \$0.23 now (taker, fee \$0.02/contract) -> net EV **+\$0.10/contract**

Trade (limit): rest BUY NO @ \$0.22 GTC until 2026-06-30 -> net EV **+\$0.11/contract** if filled

Rationale: Trump's endorsement and heavy self-funding give Mazzei significant advantages in a low-turnout August runoff, but Drummond's narrow first-round lead (26.3-26.0) and established name recognition as AG suggest competitive resistance. Base rates for Trump-endorsed deep-red runoff candidates are favorab

Key drivers: Trump endorsement strength in Oklahoma; Mazzei's \$11M self-funding advantage; Drummond's first-round performance and AG name ID; August runoff's low-turnout dynamics

Will Donald J. Trump attend The 2026 FIFA World Cup Final?

(KXTRUMPATTEND)

Category: politics | Closes: 2026-07-20 14:00 UTC

My prob: **95.0%** Confidence: **high** Market: **89.0%** Edge: **6.0%**

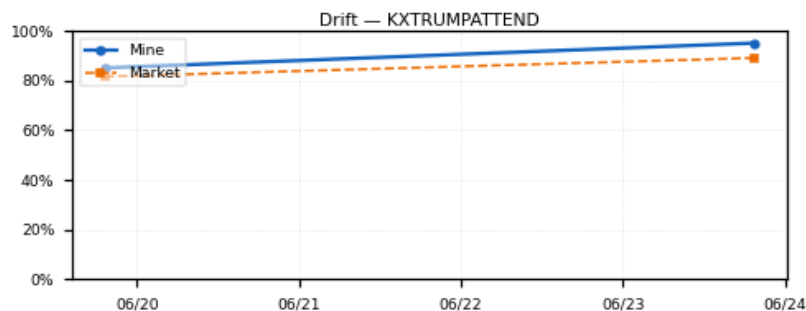

Lean: **YES** Conviction: **low**

Trade (spot): BUY YES @ \$0.90 now (taker, fee \$0.01/contract) -> net EV **+\$0.04/contract**

Trade (limit): rest BUY YES @ \$0.88 GTC until 2026-07-20 -> net EV **+\$0.06/contract** if filled

Rationale: Triple-confirmed: Infantino stated day-of (Jun 23) he and Trump will jointly present the trophy; WH holding the July 19 date; Trump attended the 2025 Club World Cup final at the same MetLife venue and handed the trophy. NSSE security is an enabler; trivial NJ logistics. Residual ~5% is the 26-day horizon (US-Iran security, age 80).

Key drivers: Infantino day-of confirmation; WH date held; 2025 same-venue precedent; NSSE security enabler

Will the Federal Reserve Hike rates by 0bps at their July 2026 meeting?

(KXFEDDECISION-26JUL-H0)

Category: economy | Closes: 2026-07-29 18:05 UTC

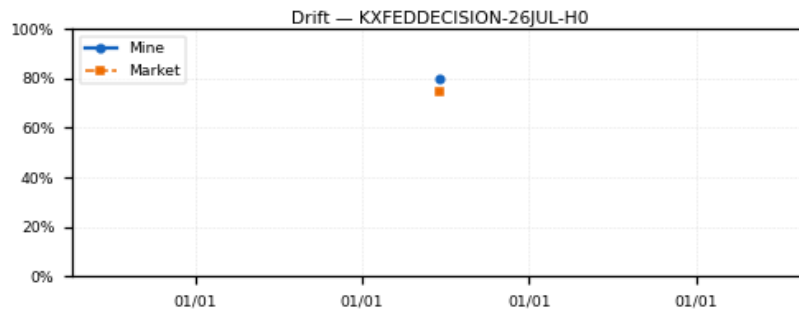

My prob: **80.0%** Confidence: **medium** Market: **74.5%** Edge: **5.5%**

Lean: **YES** Conviction: **low**

Trade (spot): BUY YES @ \$0.75 now (taker, fee \$0.02/contract) -> net EV **+\$0.03/contract**

Rationale: June was a UNANIMOUS hold; next-meeting persistence after a unanimous hold is ~85%. The 9/8 dot split is full-year, not July-specific (any hike can land later). Persistent 3.6% PCE removes cut risk but Fed signaled patience. ~0.80, slightly above market 0.745 (which folds path risk into one meeting).

Key drivers: unanimous June hold -> high next-meeting persistence; dot split is full-year not July; PCE persistence biases alt to hike not cut; market underweights single-meeting inertia

Will Trump make 0 trips to Mar-a-Lago as President in Jun 2026?

(KXLAGODAYS-26JUN-0)

Category: politics | Closes: 2026-06-30 14:00 UTC

My prob: **92.0%** Confidence: **high** Market: **96.5%** Edge: **-4.5%**

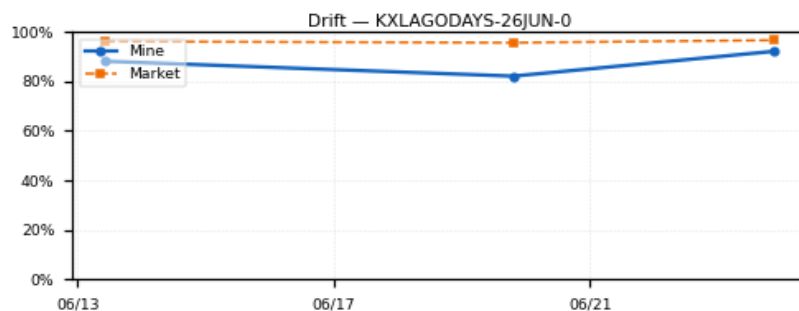

Lean: **NO** Conviction: **low**

Trade (spot): BUY NO @ \$0.04 now (taker, fee \$0.01/contract) -> net EV **+\$0.03/contract**

Trade (limit): rest BUY NO @ \$0.03 GTC until 2026-06-30 -> net EV **+\$0.04/contract** if filled

Rationale: Strong evidence of zero visits from June 1-23 (two independent sources) combined with Mar-a-Lago's seasonal closure during summer months. Only ~7 days remain in June, but the closure reduces likelihood of last-week visits. Key uncertainty is potential unscheduled trip, though base rate of ~0 summer

Key drivers: Seasonal closure of Mar-a-Lago; Zero recorded visits in first 23 days; Summer-month visit base rate of ~0

Will Genter Drummond be the Republican nominee for Governor in Oklahoma?

(KXGOVOKNOMR-26-GDRU)

Category: politics | Closes: 2026-06-30 14:00 UTC

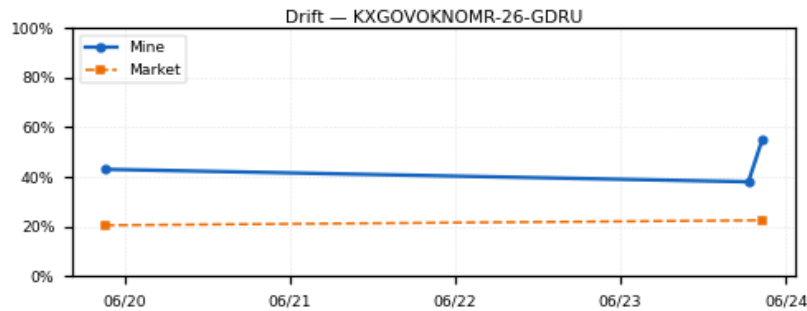

My prob: **55.0%** Confidence: **high** Market: **22.5%** Edge: **32.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: 33pt gap exceeds the hard ceiling (20pt) — beyond this divergence from a liquid market, even high confidence is treated as model error, not edge (Indicative raw EV +\$0.30/contract at my probability, not recommended.)

Rationale: Drummond's narrow first-round lead (26.3% vs 26.0%) suggests a weak but non-zero signal, while Trump's endorsement of Mazzei (and attacks on Drummond) introduces headwinds. However, establishment support for Drummond and the weaker-than-usual effectiveness of Trump's endorsement against a well-funded

Key drivers: narrow first-round lead; Trump endorsement dynamics; establishment bloc alignment

Will the 7-day moving average of transit calls through the Strait of Hormuz as reported by the IMF PortWatch be above 60 before July 1, 2026?

(KXHORMUZNORM-26MAR17-B260701)

Category: politics | Closes: 2026-06-15 14:00 UTC

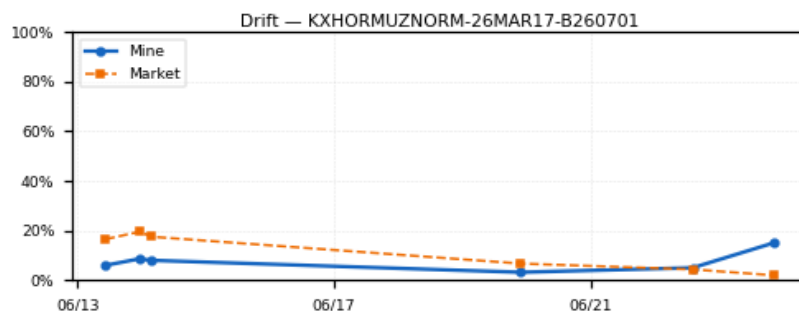

My prob: **15.0%** Confidence: **high** Market: **2.0%** Edge: **13.0%**

Lean: **NONE** Conviction: **low**

No actionable lean: ADVERSARIAL VETO: The forecaster's high confidence in a 0.15 probability rests on vague historical analogies and unproven assumptions about recovery timelines, while the market's 0.02 implies a fundamentally different assessment of risk. Without concrete evi (Indicative raw EV +\$0.12/contract at my probability, not recommended.)

Rationale: Post-disruption recovery at chokepoints like Hormuz takes weeks-to-months, not days. As of June 14, the 7-day MA was 2.57, and daily transits remain far below pre-war baselines (~94/day). Recent Iranian closure (June 20-21) likely prolonged stagnation. Even with a hypothetical ceasefire, historical

Key drivers: ceasefire durability; actual PortWatch MA trends; duration of recent Iranian closure

Will Trump make 1 trips to Mar-a-Lago as President in Jun 2026? (KXLAGODAYS-26JUN-1)

Category: politics | Closes: 2026-06-30 14:00 UTC

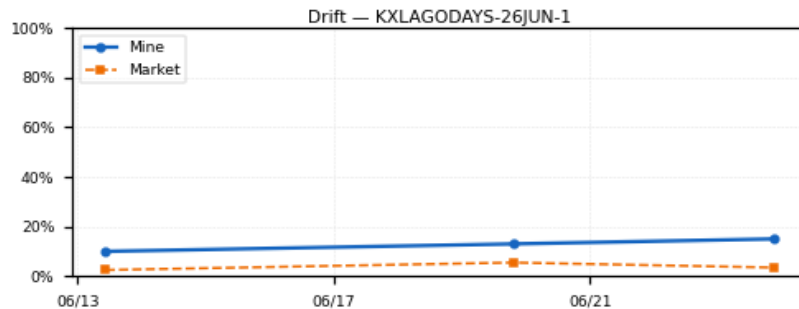

My prob: **15.0%** Confidence: **high** Market: **3.5%** Edge: **11.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: ADVERSARIAL VETO: The position assumes a speculative 'unexpected Florida event' without credible triggers, while market pricing reflects deeper institutional knowledge of seasonal patterns and historical inactivity. The forecaster's confidence is disproporti (Indicative raw EV +\$0.10/contract at my probability, not recommended.)

Rationale: Base rate of off-season one-off Mar-a-Lago trips is low, but a single unscheduled trip during June 24-30 remains plausible if an unexpected Florida event occurs. Zero trips recorded through June 23, with seasonal closure reducing likelihood, but final weekend leaves a narrow window for a rare occur

Key drivers: seasonal closure reducing trip likelihood; unscheduled Florida event possibility

The Odyssey Rotten Tomatoes score? (KXRT-ODY-90)

Category: culture | Closes: 2026-07-20 14:00 UTC

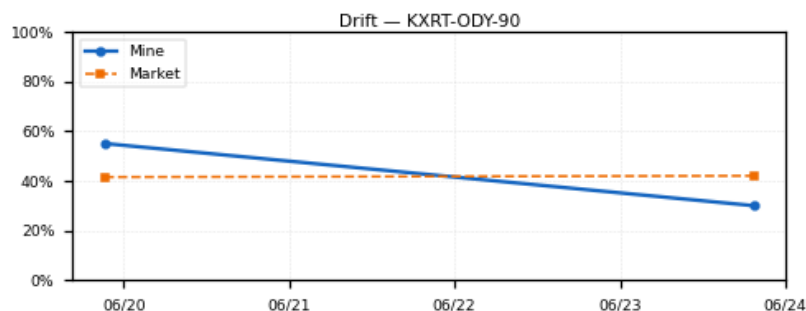

My prob: **30.0%** Confidence: **medium** Market: **42.0%** Edge: **-12.0%**

Lean: **NONE** Conviction: **low**

No actionable lean: 12pt gap vs a liquid market without high confidence — more likely my error than edge (Indicative raw EV +\$0.09/contract at my probability, not recommended.)

Rationale: Strict $\geq 91\%$ bar; among Nolan's large-event films only ~2 of 8 (~25%) cleared 91 (Interstellar 73, Tenet 70 are his maximalist swings). Resolution is the matured-count Monday after wide release, which strips opening-weekend inflation (Tenet 87% $\rightarrow$ 70%). RT shows 0 reviews yet.

Key drivers: strict 91 bar; Nolan large-event ~25% clear 91; matured-count resolution strips honeymoon; negative trailer buzz

Will the President sign more than 0 Executive Orders between Jun 7, 2026 and Jun 13, 2026? (KXEOWEEK-26JUN13-0)

Category: politics | Closes: 2026-06-27 14:00 UTC

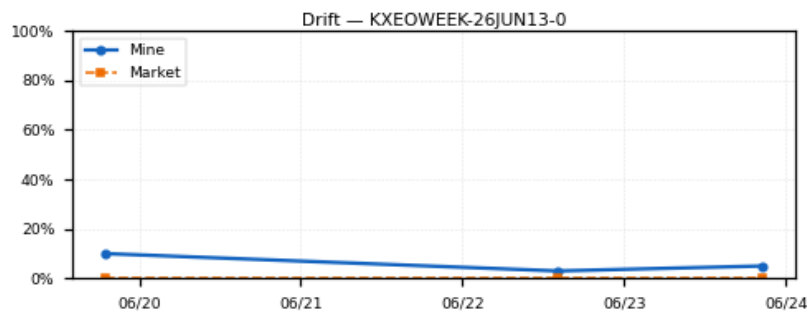

My prob: **5.0%** Confidence: **high** Market: **0.5%** Edge: **4.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: ADVERSARIAL VETO: The forecaster's edge depends on assuming federal records are complete, but the market's 0.005 implies it accounts for unrecorded events. The proposed position ignores this discrepancy, overestimates confidence in incomplete data, and fails (Indicative raw EV +\$0.03/contract at my probability, not recommended.)

Rationale: Federal records show no EO signings between Jun 7-13, 2026. While unrecorded signings remain a theoretical possibility, the absence of any documented events in the window and the presence of signed EOs on adjacent dates (Jun 3 and Jun 22) strongly suggest no activity. Key uncertainty lies in potenti

Key drivers: Explicit absence of EO-signing events in the Jun 7-13 window per federal records; Presence of signed EOs on dates immediately before and after the window; Low but non-zero possibility of unrecorded mid-window signings

Will the US agree to a new Iranian nuclear deal this year? (KXUSAIRANAGREEMENT-27-26JUL)

Category: politics | Closes: 2026-07-01 14:00 UTC

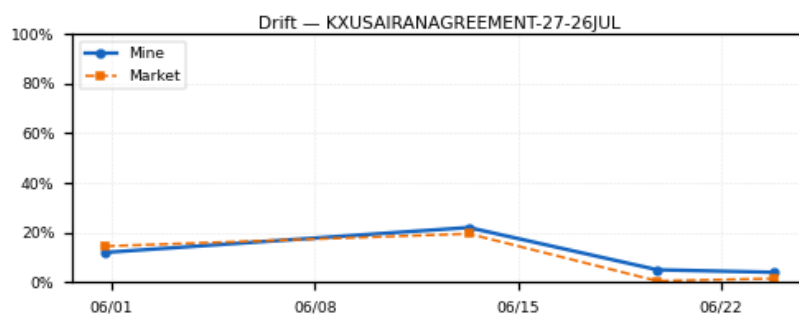

My prob: **4.0%** Confidence: **high** Market: **1.5%** Edge: **2.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 4%, modal NO) — staying out. (Indicative raw EV +\$0.01/contract at my probability, not recommended.)

Rationale: June 17 Islamabad MOU is a war-ending ceasefire, not a nuclear deal; the June 21-22 Switzerland round produced only a 60-day roadmap (~late Aug) with enrichment and IAEA access still disputed as of June 23.

Key drivers: MOU not nuclear deal; 60-day roadmap; enrichment unresolved

Will Adriano Espaillat be the Democratic nominee for NY-13? (KXNY13D-26-AESP)

Category: politics | Closes: 2026-06-30 14:00 UTC

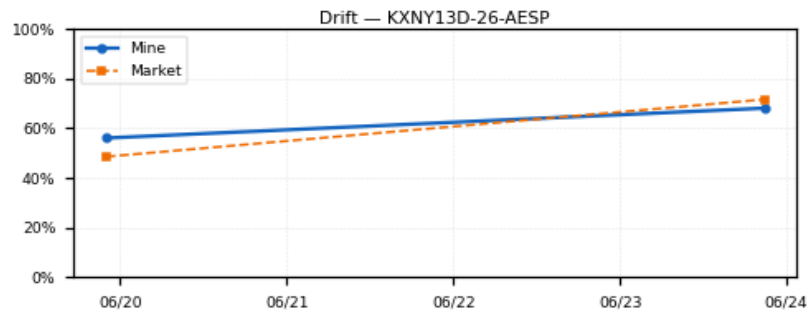

My prob: **68.0%** Confidence: **high** Market: **71.5%** Edge: **-3.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 68%, modal YES) — staying out. (Indicative raw EV +\$0.01/contract at my probability, not recommended.)

Rationale: Espaillat's strong incumbent position (experience, money, AIPAC support) aligns with 60-70% survival rates for co-ethnic incumbents facing DSA challengers. However, heavy establishment spending and leftward district trends (Mamdani effect) slightly lower this to ~68%, balancing against his structural

Key drivers: incumbent resource advantage; leftward district trends; establishment spending signals; undecided voter composition

Will the unemployment rate (U-3) be above 4.1% in June? (KXU3-26JUN-T4.1)

Category: economy | Closes: 2026-07-02 14:00 UTC

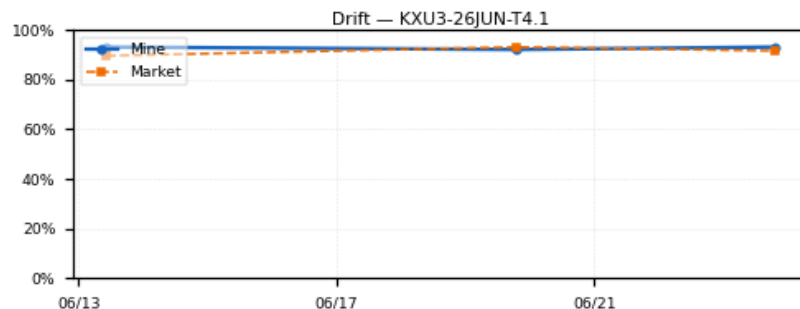

My prob: **93.0%** Confidence: **high** Market: **91.5%** Edge: **1.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 93%, modal YES) — staying out. (Indicative raw EV +\$0.00/contract at my probability, not recommended.)

Rationale: U-3 has printed 4.3-4.5% every month since mid-2025 (May 4.3%, June consensus 4.3-4.4%); a sub-4.1% print needs a multi-tenth downside surprise with no catalyst.

Key drivers: sticky 4.3-4.5 range; consensus 4.3-4.4; +172k May payrolls

Will legislation that reauthorizes FISA Section 702 authority become law before Jun 25, 2026? (KXFISAEXTEND-26JUN-26JUN25)

Category: politics | Closes: 2026-07-01 14:00 UTC

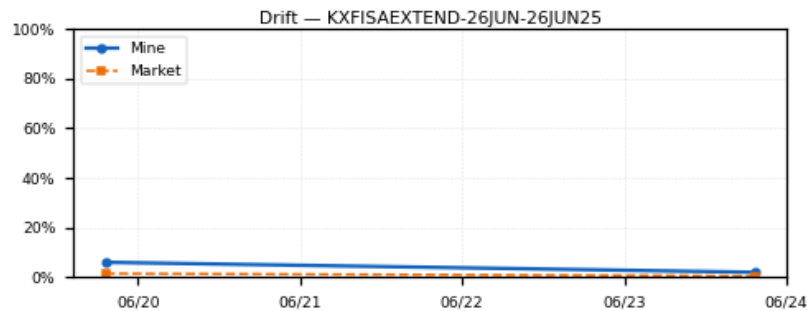

My prob: **2.0%** Confidence: **high** Market: **0.5%** Edge: **1.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 2%, modal NO) — staying out.

Rationale: Only scheduled FISA item in-window is a June 24 closed Senate Intel briefing (not a vote); three-way veto stack (Pulte ouster demand, Trump's SAVE Act add-on, GOP warrant holdouts), Clayton off-ramp killed Jun 17, and FISC certs run to ~Mar 2027 removing urgency. Both chambers + signature in ~2 days is near-impossible.

Key drivers: no bill on floor; three-way standoff; FISC certs to Mar2027; closed briefing not a vote

Will any U.S. House member visit Iran before Jul 1, 2026? (KXVISITIRAN-26JUL01-AHOU)

Category: politics | Closes: 2026-07-01 14:00 UTC

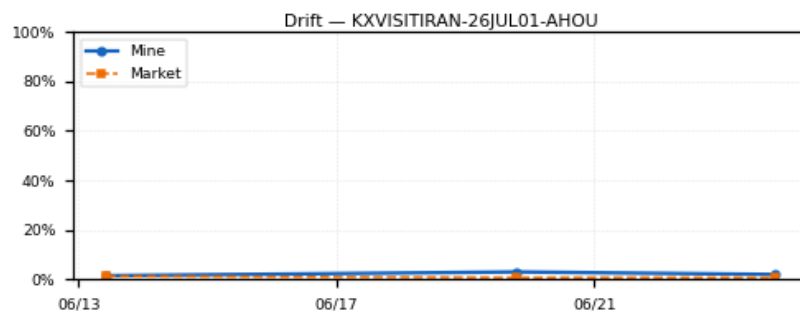

My prob: **2.0%** Confidence: **high** Market: **0.8%** Edge: **1.2%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 2%, modal NO) — staying out.

Rationale: No US House member has visited Iran since 1979 and none is reported planning one; the slight bump only reflects the 435-member pool and unannounced-visit tail risk.

Key drivers: 435-member pool; no precedent; travel warnings

Will JD Vance visit Iran before Jul 1, 2026? (KXVISITIRAN-26JUL01-JVAN)

Category: politics | Closes: 2026-07-01 14:00 UTC

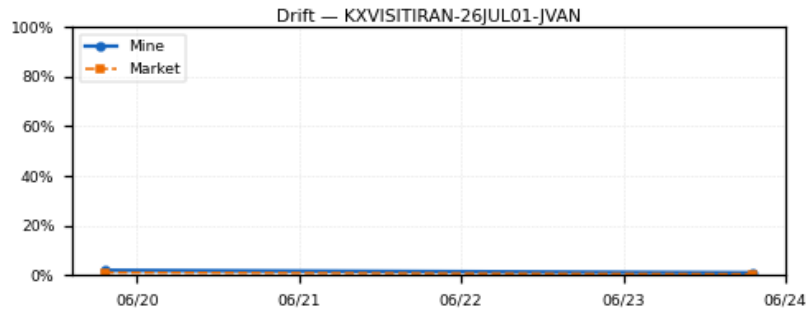

My prob: **1.0%** Confidence: **high** Market: **0.4%** Edge: **0.6%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 1%, modal NO) — staying out.

Rationale: Vance personally led the US delegation in Switzerland on Jun 21-22 (confirmed off Iranian soil); a sitting VP on Iranian soil days after a war is unprecedented.

Key drivers: Vance in Switzerland; no precedent

Will Marco Rubio visit Iran before Jul 1, 2026? (KXVISITIRAN-26JUL01-MRUB)

Category: politics | Closes: 2026-07-01 14:00 UTC

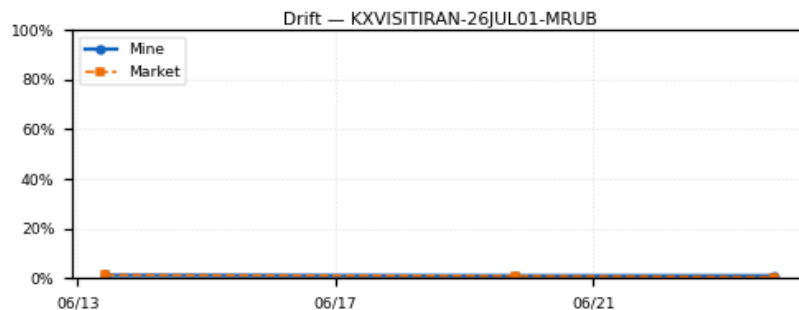

My prob: **1.0%** Confidence: **high** Market: **0.5%** Edge: **0.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 1%, modal NO) — staying out.

Rationale: Rubio is on a confirmed Gulf tour (UAE/Kuwait/Bahrain, Jun 23-25) with Iran not on the itinerary; no sitting SecState has entered Iran since 1979.

Key drivers: Gulf tour not Iran; no precedent since 1979

Will Trump make 2 trips to Mar-a-Lago as President in Jun 2026? (KXLAGODAYS-26JUN-2)

Category: politics | Closes: 2026-06-30 14:00 UTC

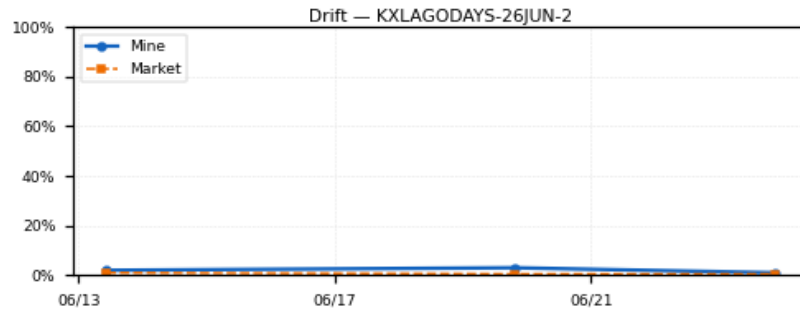

My prob: **1.0%** Confidence: **high** Market: **0.5%** Edge: **0.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 1%, modal NO) — staying out.

Rationale: Seasonal closure of Mar-a-Lago during summer makes any visits impossible, directly contradicting the 'exactly 2 trips' claim. Base rate of two off-season trips in seven days is near-impossible, reinforcing zero probability.

Key drivers: Seasonal closure of Mar-a-Lago; Impracticality of two trips in seven days

Will Iván Cepeda Castro win the next Colombian presidential election? (KXCOLOMBIAPRES-26-ICAS)

Category: politics | Closes: 2026-06-25 04:00 UTC

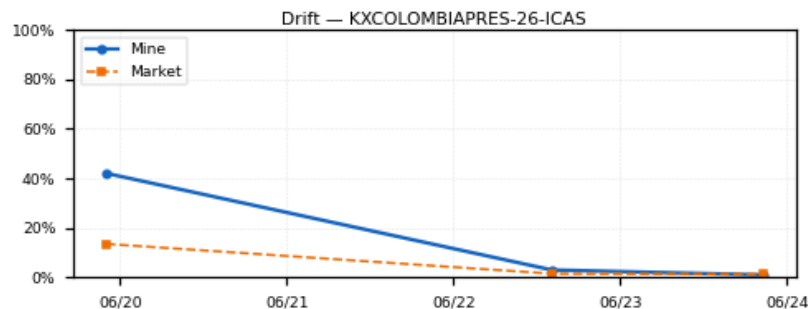

My prob: **1.0%** Confidence: **high** Market: **1.3%** Edge: **-0.3%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 1%, modal NO) — staying out.

Rationale: Cepeda trails by a massive margin (250k votes) with 99.99% counted, and his recount challenge failed to net significant votes (273). Base rate suggests <2% chance of certified result reversal via legal challenge. While uncertainty remains about potential appeals, the vote gap and failed reclamacione

Key drivers: current vote gap; failed recount/reclamation outcomes

Will Abelardo de la Espriella win the next Colombian presidential election?

(KXCOLOMBIAPRES-26-AESP)

Category: politics | Closes: 2026-06-25 04:00 UTC

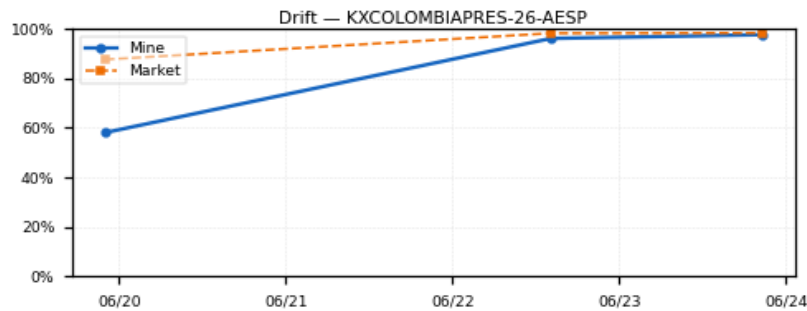

My prob: **97.5%** Confidence: **low** Market: **98.2%** Edge: **-0.7%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 98%, modal YES) — staying out.

Rationale: De la Espriella's lead (0.96%) with 99.99% counted and CNE's rejection of Cepeda's recount request strongly support certification. Base rate of <2% for sub-1-point reversals applies, but IRI validation and narrow margin (just under 1%) suggest low reversal risk. Certification timing uncertainty (~Ju

Key drivers: CNE's rejection of recount request; IRI validation of process integrity; Sub-1-point margin aligning with <2% reversal base rate

Will Graham Platner drop out of the 2026 United States Senate election in Maine before Jul 14, 2026?

(KXPLATNERDROPOUT-26)

Category: politics | Closes: 2026-07-14 14:00 UTC

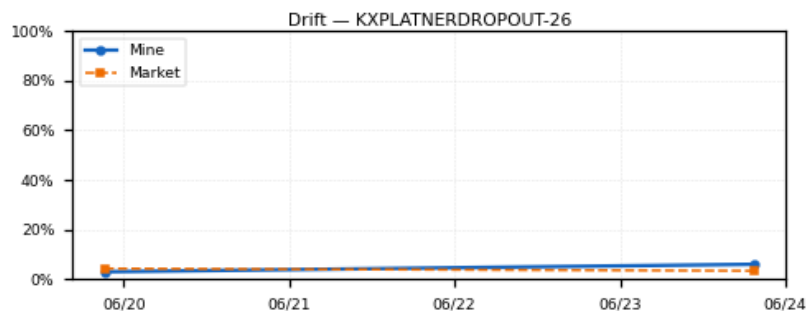

My prob: **6.0%** Confidence: **medium** Market: **3.4%** Edge: **2.6%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 6%, modal NO) — staying out.

Rationale: Won nomination ~72% on June 9 with scandals already public, publicly defiant, party has no mechanism to force exit. Maine's ballot-replacement deadline is 5pm July 13 (inside the window), which mechanically concentrates any drop-out into these 3 weeks, lifting the tail from ~2% to ~6%; no fresh post-June-10 shock found.

Key drivers: won 72% post-scandal; defiant; no force mechanism; July13 replacement deadline in-window

CPI year-over-year in Jun 2026? (KXECONSTATCPIYOY-26JUN-T4.1)

Category: economy | Closes: 2026-07-14 14:00 UTC

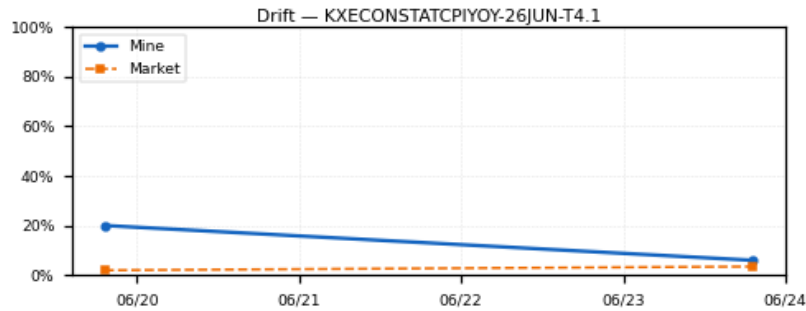

My prob: **6.0%** Confidence: **medium** Market: **3.5%** Edge: **2.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 6%, modal NO) — staying out.

Rationale: 4.1% needs ~+0.2% MoM, two-three tenths above my energy-driven estimate; a tail given the ceasefire oil collapse.

Key drivers: energy reversal; YoY drop

Will CPI rise more than 0.1% in June 2026? (KXCPI-26JUN-T0.1)

Category: economy | Closes: 2026-07-14 13:56 UTC

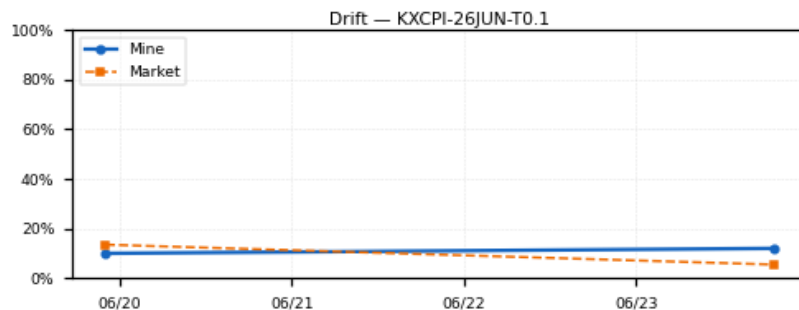

My prob: **12.0%** Confidence: **medium** Market: **5.5%** Edge: **6.5%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 12%, modal NO) — staying out.

Rationale: MoM >0.2% needs roughly flat-to-positive energy plus firm core; the documented ~13% gasoline drop makes that a clear tail.

Key drivers: gasoline collapse

CPI year-over-year in Jun 2026? (KXECONSTATCPIYOY-26JUN-T3.9)

Category: economy | Closes: 2026-07-14 14:00 UTC

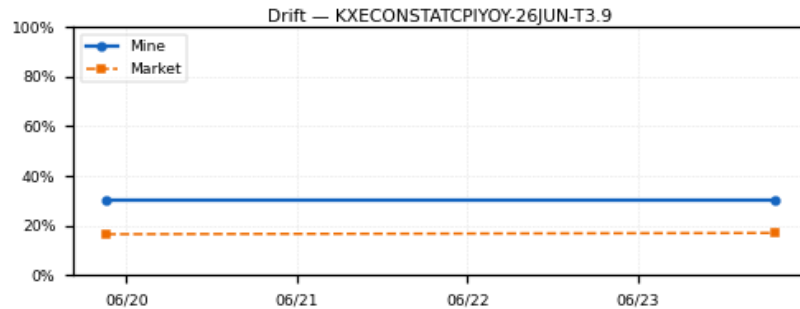

My prob: **30.0%** Confidence: **low** Market: **17.0%** Edge: **13.0%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 30%, modal NO) — staying out.

Rationale: 3.9% is the modal single-decimal YoY bucket (Trading Economics point forecast; ~0.0% MoM off the +0.3% June-2025 base), though probability is thin across exact buckets and my MoM center tilts slightly toward 3.8%.

Key drivers: energy YoY reversal; June-2025 base roll-off +0.3; TE forecast 3.9

Will CPI rise more than 0.0% in June 2026? (KXCPI-26JUN-T0.0)

Category: economy | Closes: 2026-07-14 13:56 UTC

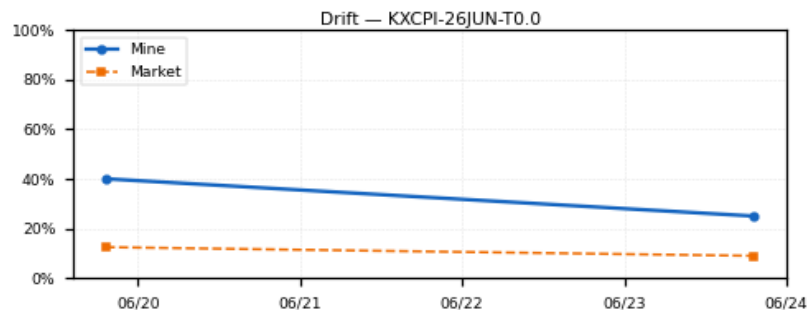

My prob: **25.0%** Confidence: **medium** Market: **9.0%** Edge: **16.0%**

Lean: **NONE** Conviction: **low**

No actionable lean: no +EV value bet at the ask (my prob 25%, modal NO) — staying out.

Rationale: A positive June headline needs gasoline's SA decline to be far milder than the ~9-13% the primary weekly data implies; sticky core (+0.2%) alone can't offset it, so YES unlikely but above market.

Key drivers: gasoline collapse; core floor

Will CPI rise more than -0.1% in June 2026? (KXCPI-26JUN-T-0.1)

Category: economy | Closes: 2026-07-14 13:56 UTC

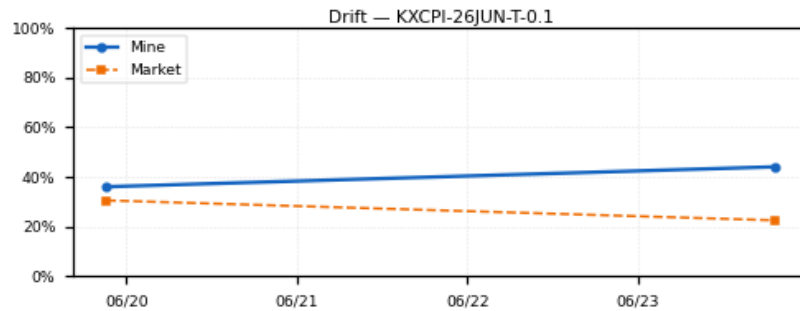

My prob: **44.0%** Confidence: **low** Market: **22.5%** Edge: **21.5%**

Lean: **NONE** Conviction: **low**

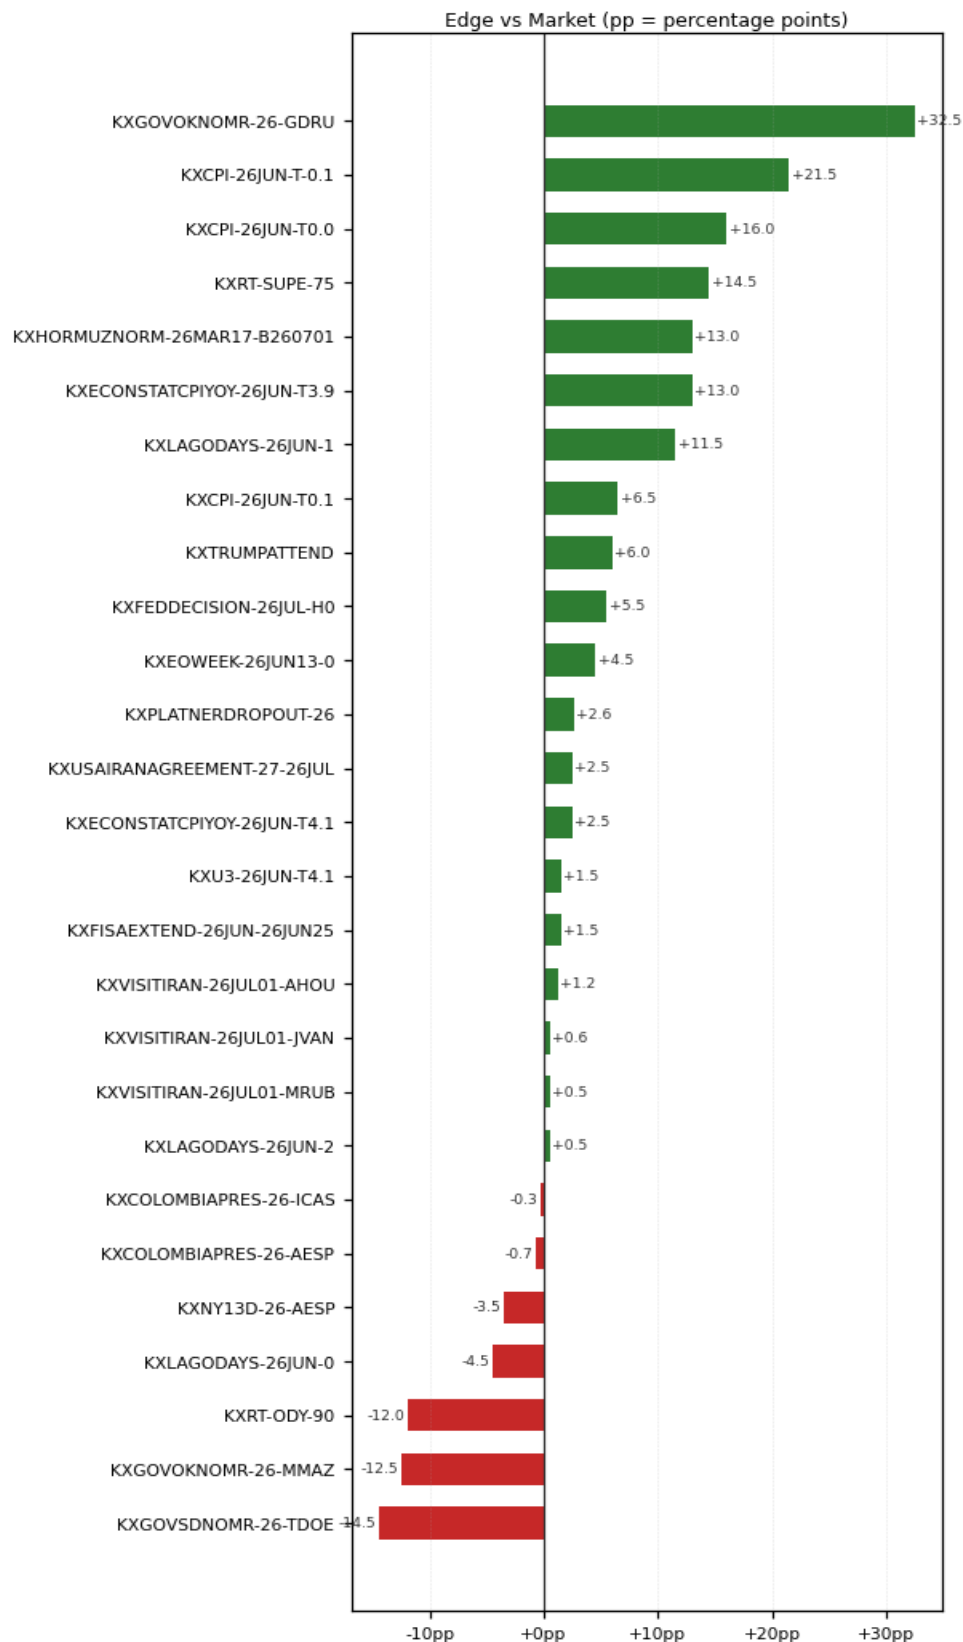

No actionable lean: no +EV value bet at the ask (my prob 44%, modal NO) — staying out.

Rationale: Bottom-up from primary gasoline data (AAA -13.3% MoM to \$3.93; EIA WTI \$95->\$73): June headline CPI center ~-0.1% MoM, sitting right on this threshold, so $P(\geq 0.0\%)$ is near a coin flip — meaningfully above market, but a wide fade.

Key drivers: gasoline -13% MoM (AAA/EIA); core +0.2 floor; SA seasonal; threshold rounding

Edge Overview

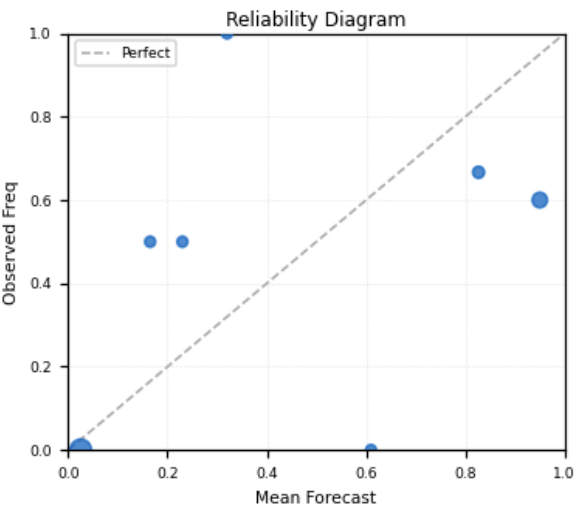

Profitable Leans (after fees)

Ticker	Side	Spot EV/contract	Limit EV/contract	Conviction
KXGOVSDNOMR-26-TDOENO		+\$0.12	+\$0.13	high
KXRT-SUPE-75	YES	+\$0.12	+\$0.15	high

KXGOVOKNOMR-26-MMAZIO	NO	+\$0.10	+\$0.11	medium
KXTRUMPATTEND	YES	+\$0.04	+\$0.06	low
KXFEDDECISION-26JUL-H25	YES	+\$0.03	—	low
KXLAGODAYS-26JUN-0	NO	+\$0.03	+\$0.04	low

Fees use Kalshi's standard taker formula $\text{ceil}(0.07 \cdot p \cdot (1-p)) / \text{contract}$; resting (maker) limit fills may be cheaper on some series. Paper only - read-only key places no orders.

Lessons Learned

For KXTRUMPSAY-style verbatim-utterance markets, resolution is a literal tracked quote from the resolution source, NOT topical salience — never forecast above the market without a CONFIRMED verbatim quote, and treat any 80pt fade against a liquid market as model error. This is exactly the case the new hard_gap_ceiling now hard-blocks regardless of confidence.

2026-06-22 | resolution | KXTRUMPSAY-26JUN22-URAN | statements [\[unjustified-market-divergence\]](#)
Brier (mine): 0.9801 | Brier (market): 0.0342 | **lost to market**

When diverging below a liquid market that is pricing a strong institutional base rate, require a specific, verifiable reason; narrative of 'division' is not evidence of a formally recorded dissent. Anchor on the base rate.

2026-06-19 | resolution | KXFOMCDISSENTCOUNT-26JUN-0 | economy [\[unjustified-market-divergence\]](#)
Brier (mine): 0.3364 | Brier (market): 0.1332 | **lost to market**

During an active supply-disruption crisis, anchor flow estimates to the SUPPRESSED regime, not an assumed recovery, until data confirms normalization; and do not enter a position when divergence from a liquid market is small and rests on an unverified assumption.

2026-06-19 | resolution | KXHORMUZWEEKLY-26JUN14-T25 | politics [\[unjustified-market-divergence\]](#)
Brier (mine): 0.3721 | Brier (market): 0.2450 | **lost to market**

Never move a forecast materially on one noisy data point (esp. a single poll); weight by reliability and require corroboration. Don't recommend fading a liquid market on a low-confidence estimate.
